Document Name	LoanDocX-Router- Low-level design (LLD)
Documented by	Karthikeyan
Documented on	17/01/2026

Router X over all Process

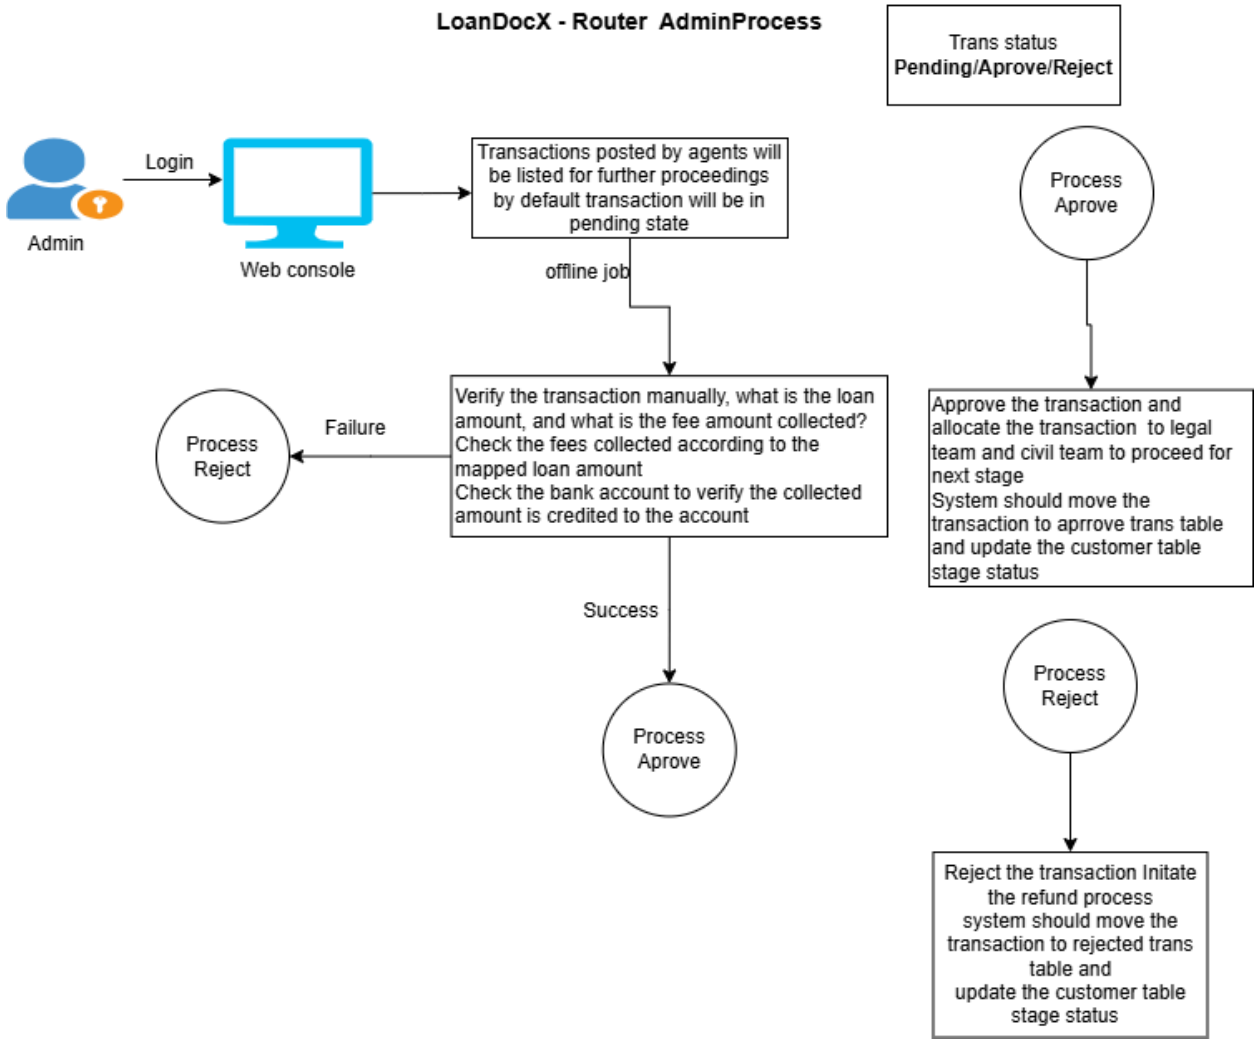

Agent Process

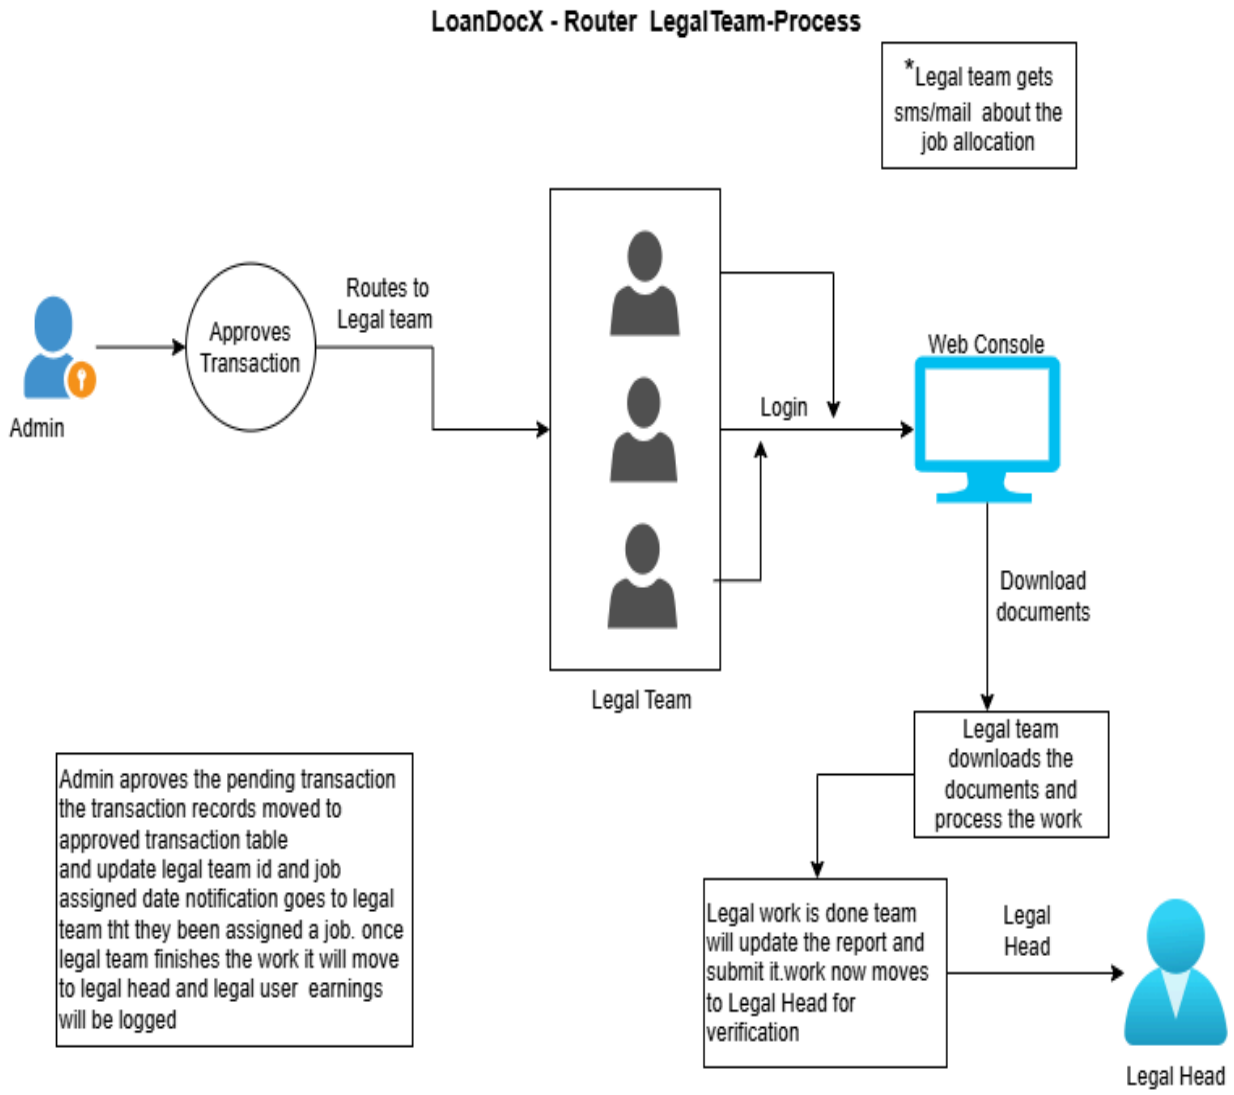

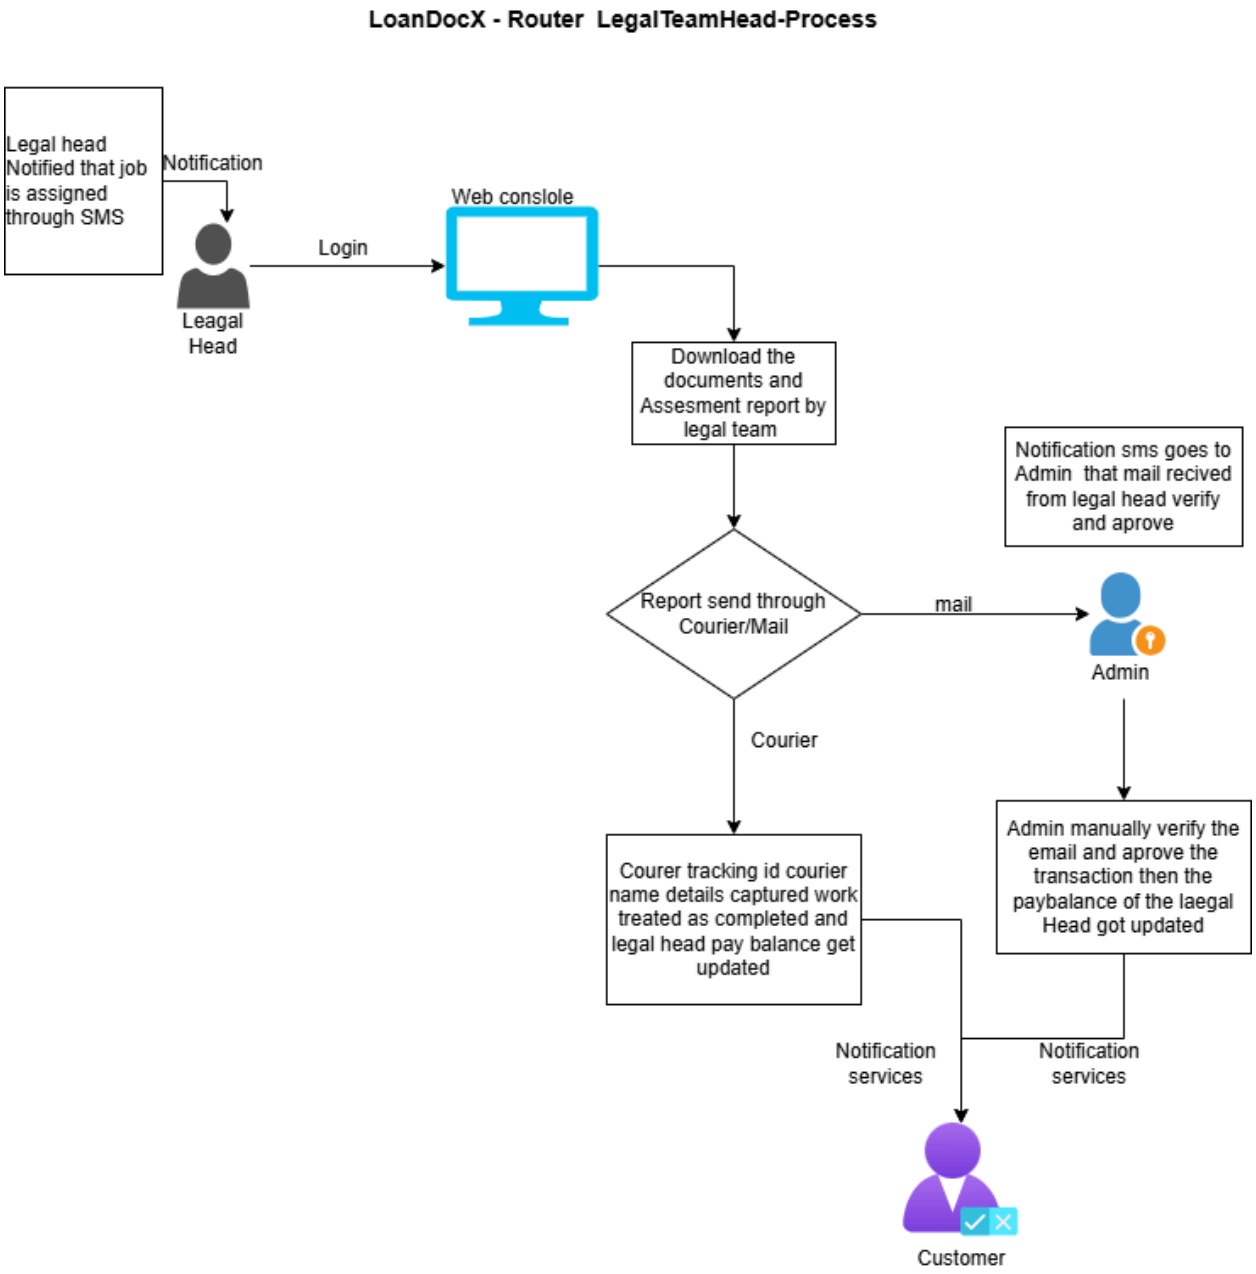

Admin Process

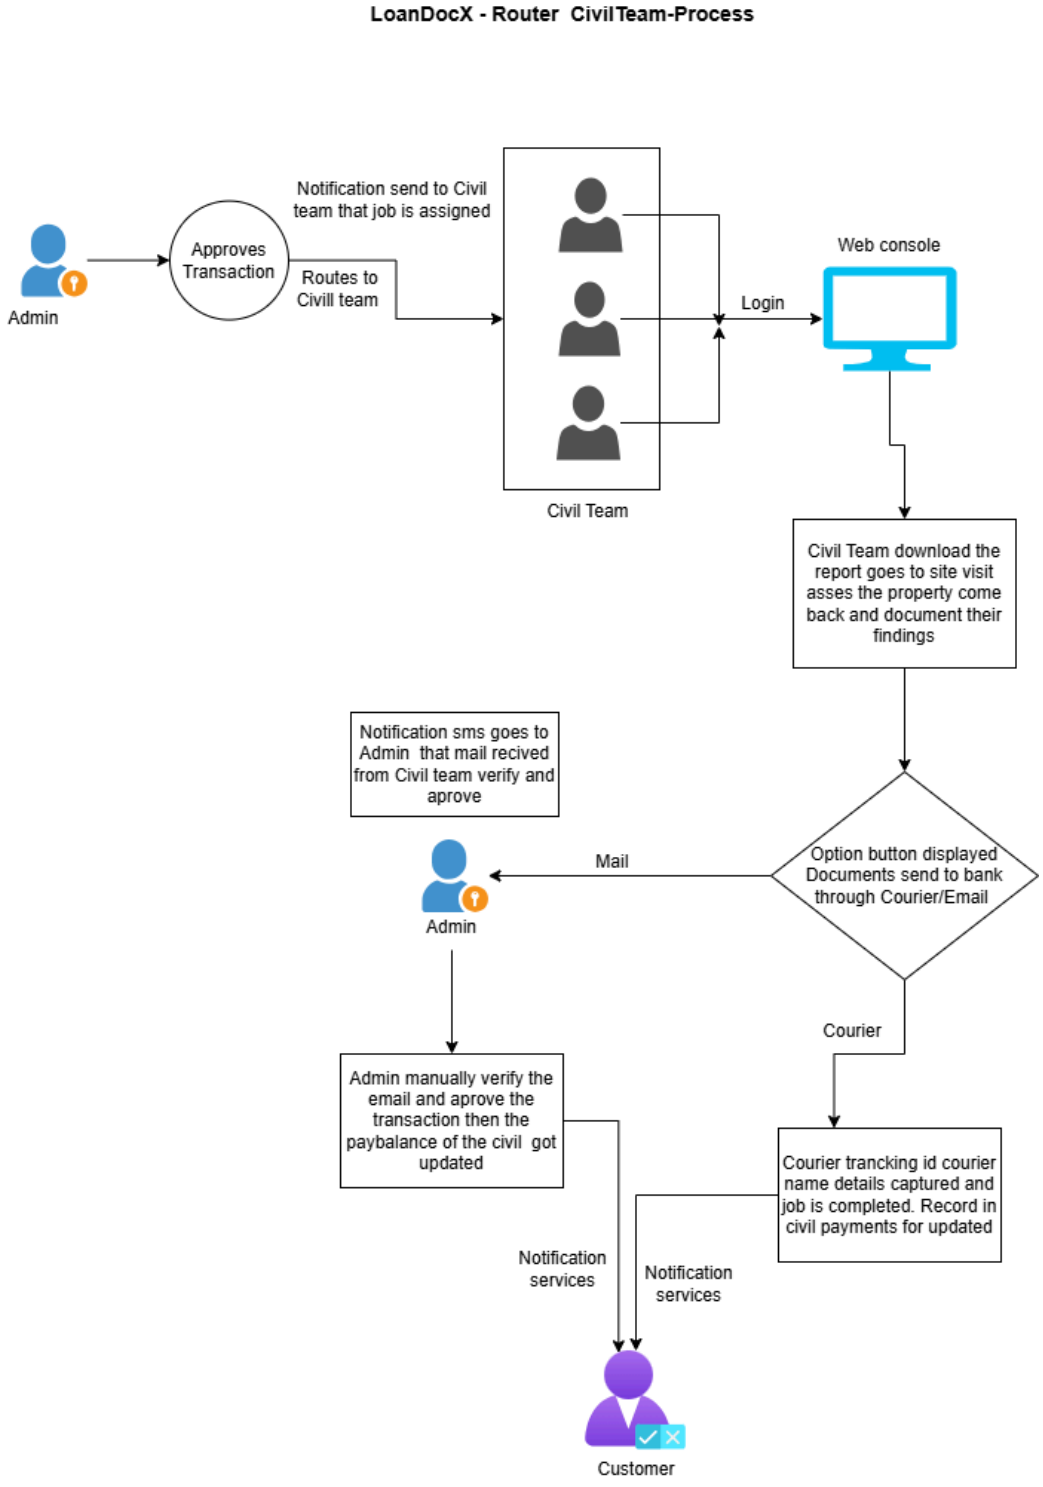

Legal Team Process

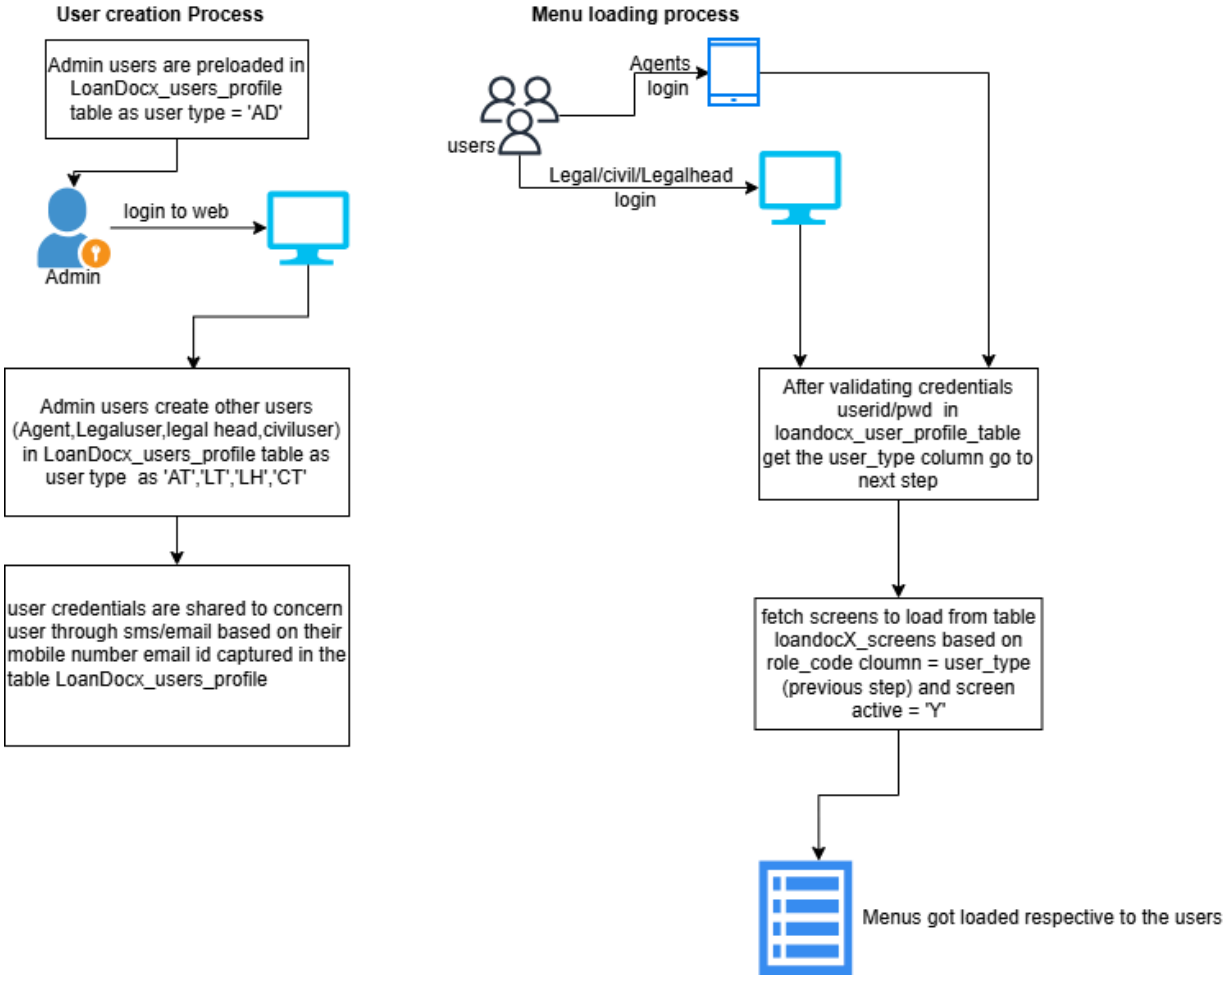

Legal Head Process

Civil Team Process

User creation and menu loading process

ALGORITHM – User Creation + Menu Loading Process

USER CREATION PROCESS (Admin Only)

Step 1 — Preload Admin Users

1. Insert the default admin users into the LoandocX_users_profile table**.**
2. Set:
   `user_type = 'AD'`
   `user_active = 'Y'`

Step 2 — Admin Login

1. Admin opens the web app.
2. Admin enters username & password.
3. Backend:
   Validate credentials in `Loandocx_login_user`.
   If `user_type != 'AD'`, reject login.
   If valid → return success

Step 3 — Admin Creates New Users

When the admin creates Agent, Legal, Legal Head, or Civil users:

1. Admin enters user details:
   - Name
   - Mobile number
   - Email
   - Address
   - Aadhar
   - User Type (`AT`, `LU`, `LH`, `CU`)

2. Backend inserts into:
   `LoandocX_users_profile table and`

user_pwd column value automatically generated (userid+mobile number(last 4 digits)

Step 4 — Send Credentials to User

1. After insert success: Generate login username & temporary password.

2. Send credentials:
   SMS to mobile number and Email to email ID

MENU LOADING PROCESS (For all users)

Step 1 — User Login

1. User opens Web or Mobile app.
2. Enters:
   - username
   - password

Step 2 — Validate Credentials

1. Backend verifies from tables:
   LoandocX_users_profile
2. If invalid:
   Return error “Invalid username/password”.

3. If valid:

   Fetch user_type from LoandocX_users_profile.

Step 3 — Load Menu Screens

Query `Loandocx_screens` table:

```
SELECT *
FROM Loandocx_screens
WHERE role_code = :user_type
AND screen_active = 'Y';
```

Step 4 — Return Menu List to App

1. Backend returns JSON response:
    - Screen Name
    - Screen URL

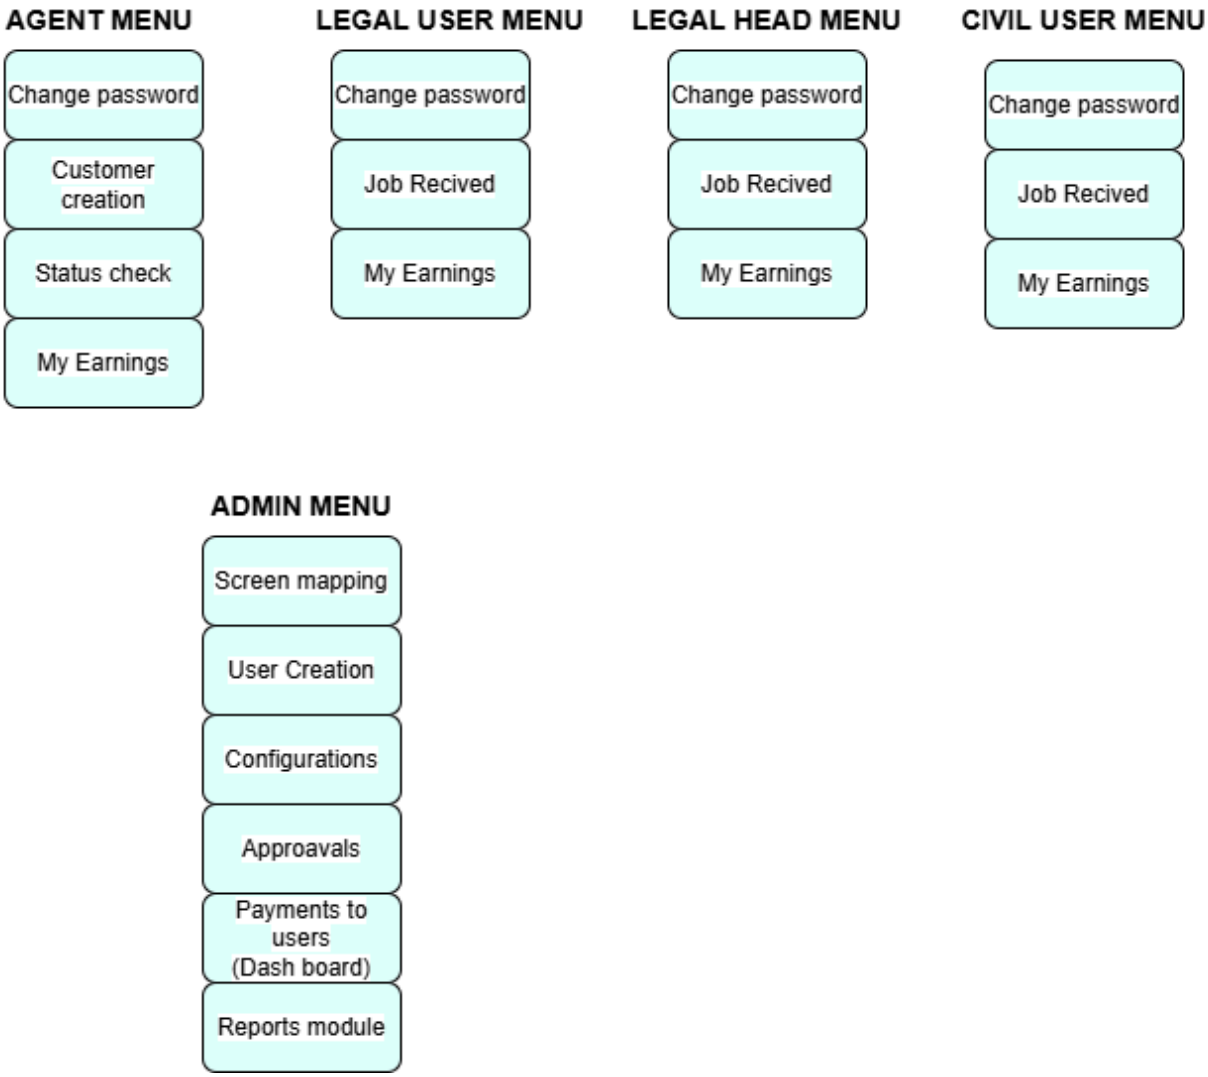

Example:

```
{
 "screens": [
   {"name":"Dashboard","url":"/dashboard"},
   {"name":"Upload Docs","url":"/upload"},
   {"name":"Track Case","url":"/track"}
 ]
}
```

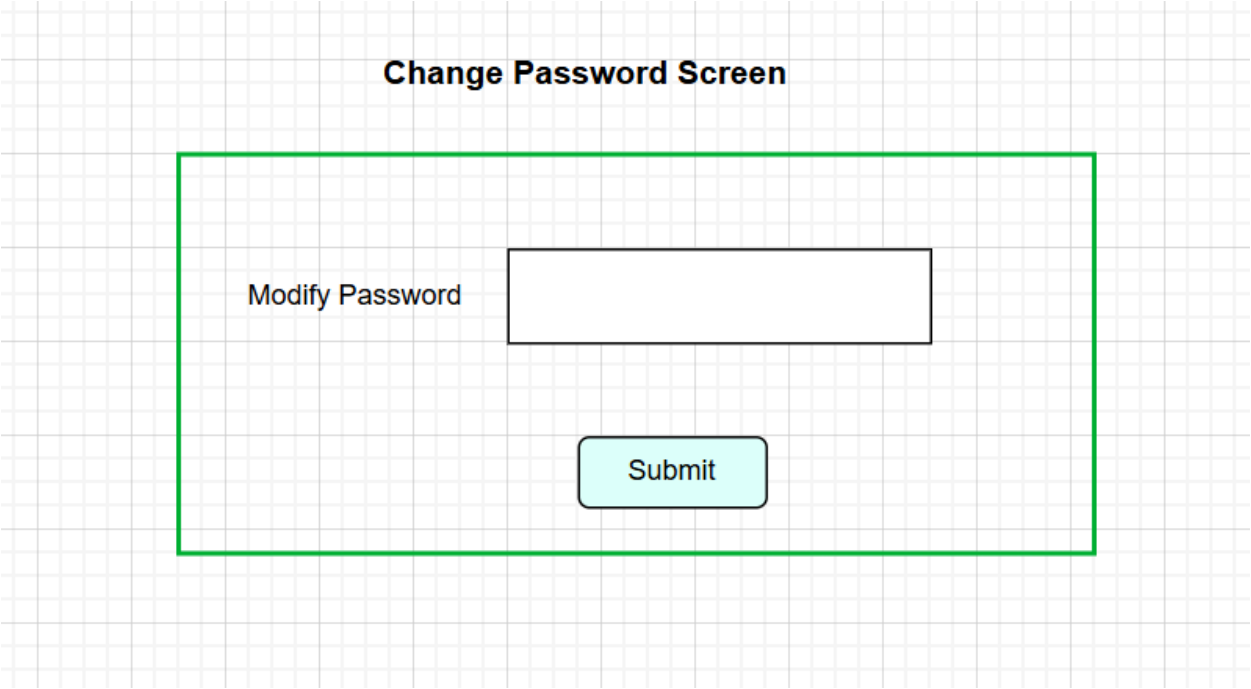

Step 6 — Display Menu on UI

1. The web or Mobile app receives the list.
2. Render side menu / bottom bar dynamically
3. User now sees only the screens allowed for their role.

Loandocx user menu

Agent Module/ Screens

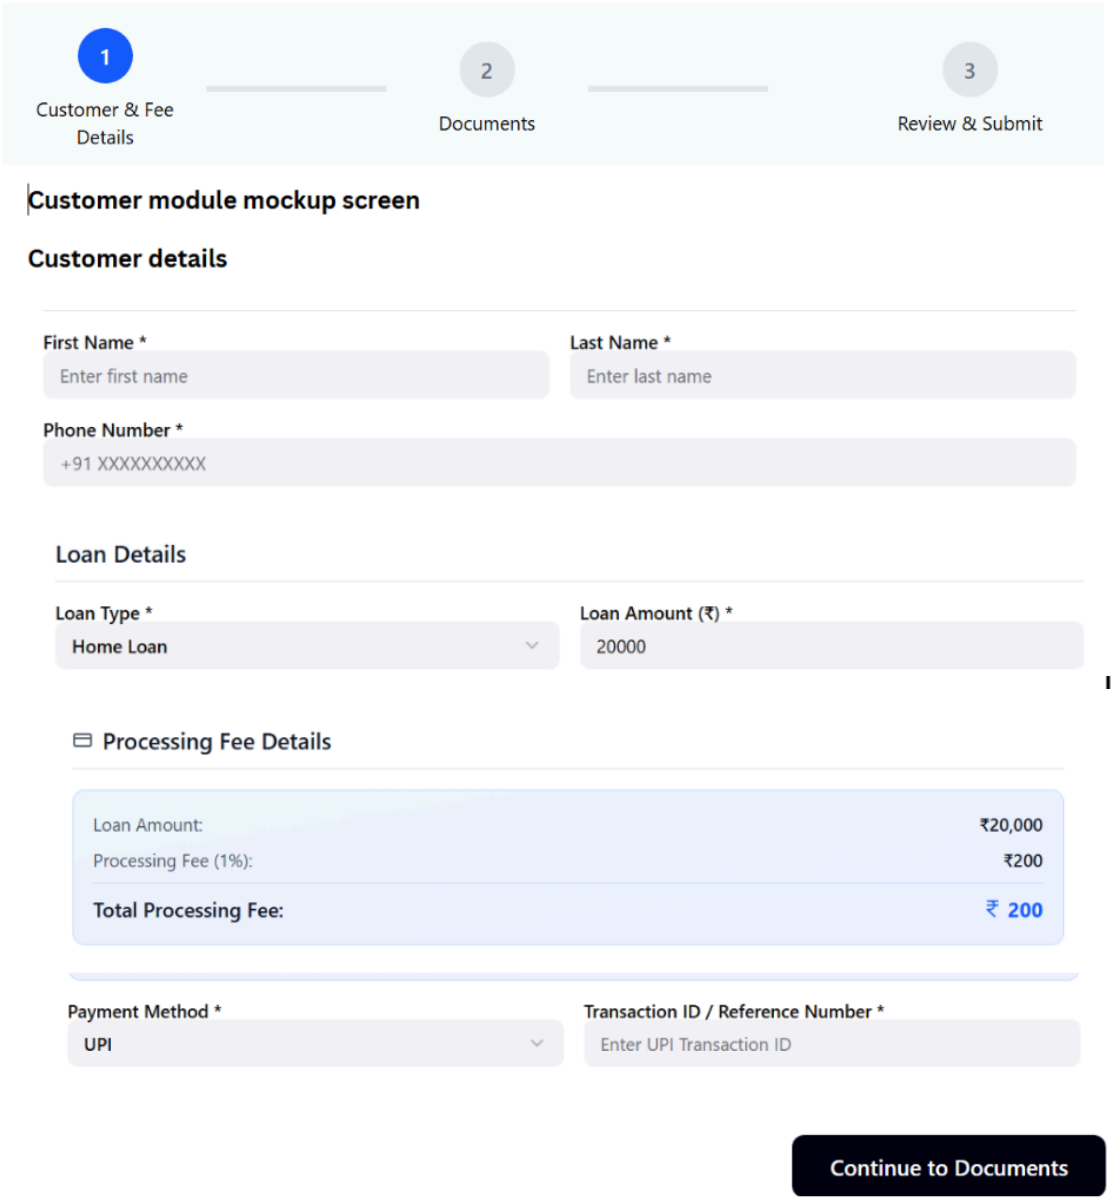

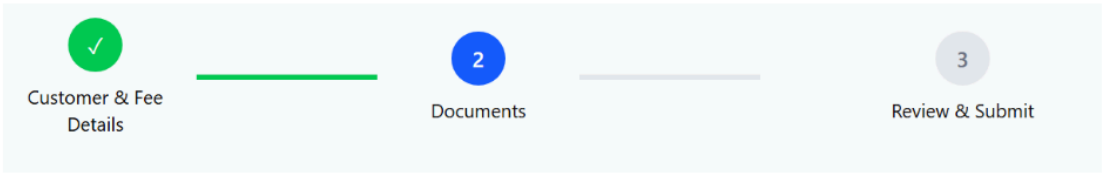

The agent will be given the provision to modify the password. The agent enters the password and submits it. The value will be encrypted and updated in the User_pwd column in the LoandocX_Users_profile table

Update LoandocX_Users_profile table set user_pwd = :encrypted_val
Where user_id = : login_user_id
And user_type = : user_type

Note: user type should be fetched from the LoandocX_Users_profile table when the user logs into the system, which should be retained throughout the session

Customer Loan Request Screen

Processing Fee

Edit

Amount Paid
₹100

Payment Method
UPI

Transaction ID
`10000`

Submit Application

All customer details will be stored in the table **LoandocX_Customers_loan_details** Customer id is auto-generated.

For **Loan name (**in the screen it is given as loan type), there should be drop down box where the list will be fetched from the table **LoandocX_loan_types**

Select Loan_id, Loan_name from LoandocX_loan_types
Where Loan_active = 'Y'

All these fields need to be captured
UPI_ID,Address1,Address2,Mobile_number,Email_id,
Aadhar_number,Pan_Card_number

*In this Address1,Address2, mobile number, aadhar number, and PAN card are mandatory fields

When the Agent enters the **loan amount**, then the processing fees should be automatically fetched in the processing fees text box user should not modify the processing fees it should be disabled

To fetch processing fees, select from the table **LoandocX_loan_processing_fees** Based on the loan amount value

Select processing_fees into v_proc_fees from LoandocX_loan_processing_fees where
From_loan_amount > : Loan_amount and to_loan_amount <= : Loan_amount

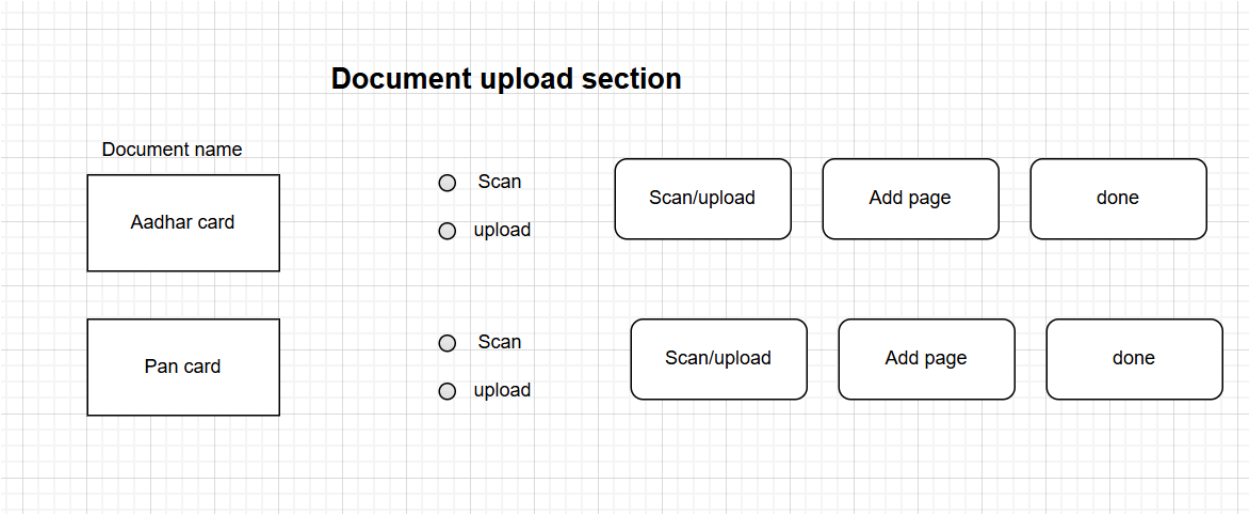

These columns need to be captured, and all these columns are mandatory
Amount_recieved
Loan_bank_name,Loan_branch_name,Loan_branch_address1,
Loan_branch_address2,Loan_branch_mailid

The Amount_Received column should be entered by the agent with the amount that the customer transferred. The processing fees and amount received should be equal; otherwise, transactions should not be submitted

For the Documents upload section, first fetch the details of what documents are required for the requested loan name

Select doc_name,doc_description from LoandocX_loan_doc_checklist where loan_id = v_loan_id

Based on this data document upload screen should be designed like

Some documents have one page, like aadhar card and pan card, and also documents with multiple pages, like land documents. App should be provisioned in such a way if the agent chooses the scan option, then to collect all pages of the document if the document runs multiple pages, then the agent will use the **Add page** and keep scaning Once he scans all pages, he should press the **Done** button, the app should preview the pages scanned pertaining to the document, and get confirmation. Once confirmed, proceed to the next document upload.

All the documents should be stored in PDF format

From the screen, all these fields will be inserted

Insert into LoandocX_Customers_loan_details(customer_name,loan_name,upi_id,address1, address2,mobile_number,email_id, aadhar_number,pan_card_number,loan_amount,processing_fees,amount_recived ,agent_id,creation_date,Loan_bank_name,Loan_branch_name,Loan_branch_addr ess1,Loan_branch_address2,Loan_branch_mailid)

Values(:customer_name,:loan_name,:upi_id,:address1,:address2,:mobile_number,:email_id,
:aadhar_number,:pan_card_number,:loan_amount,:processing_fees,:amount_recievd,:login_user,
sytem_date,:Loan_bank_name,:Loan_branch_name,:Loan_branch_address1,:Loan_branch_address2,:Loan_branch_mailid);

After inserting into the **LoandocX_Customers_loan_details** table, get the customer_id generated, and now go to the next step to insert into the transactions table.

Insert into
LoandocX_Transactions(loan_name,customer_id,agent_id,trans_creation_date,transaction_state) values(:loan_name,:v_cust_id,:login_user,:system date,'P');

Now get the generated **transaction id** into v_tran_id
Create the folder in the server and name the folder based on the **transaction id** value
Store all received documents under a prefix with the document name
Get the document path that needs to be updated in the table below

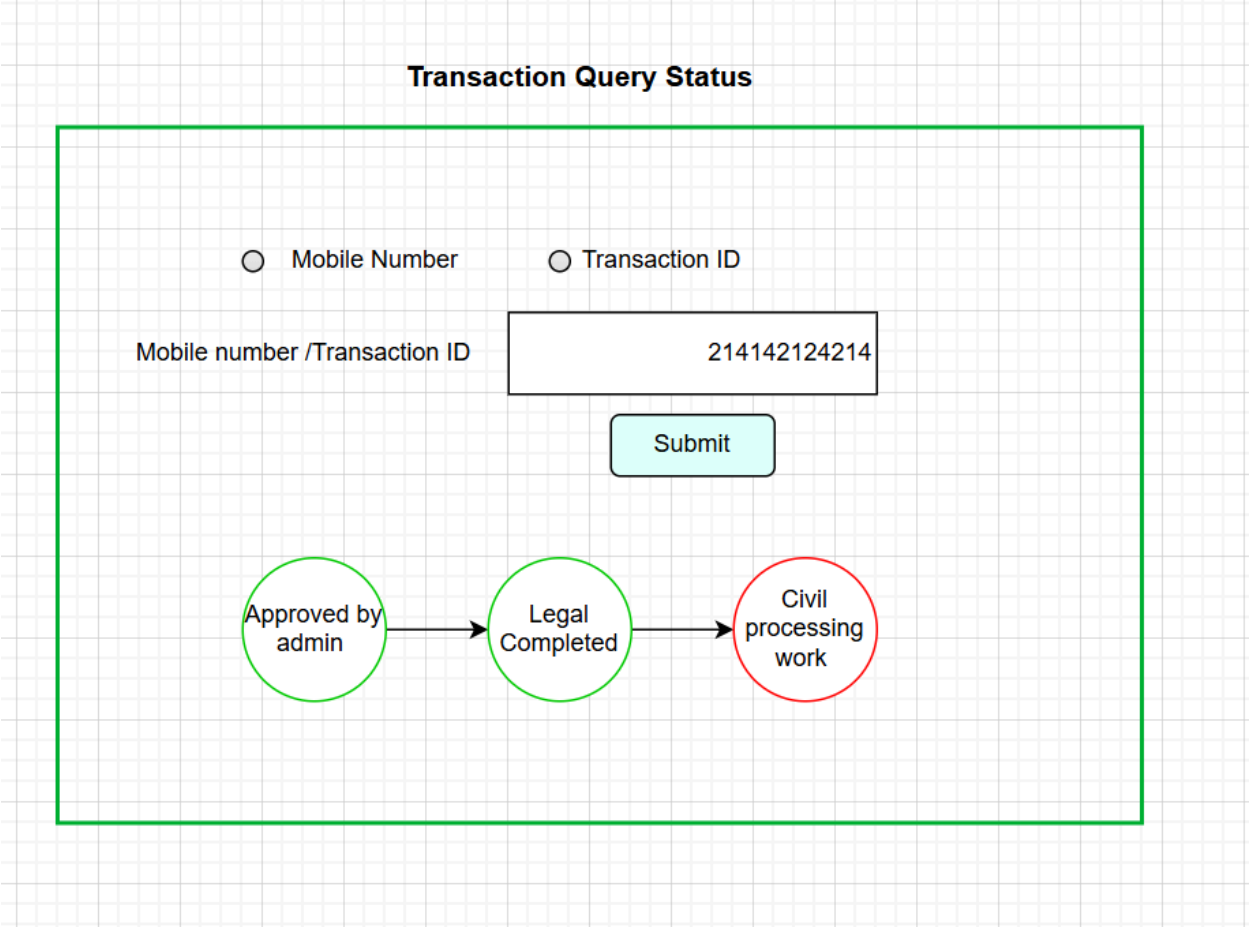

Now update the **transaction id** and **document path** in the
LoandocX_Customers_loan_details table for that **customer id**

Update LoandocX_Customers_loan_details table
Set transaction_id = V_tran_id, document_path = v_document_path
Where customer_id = v_cust_id;

<u>Notification services</u>

Admin should be notified by sms/mail that "**T*ransaction ID is in your job queue for your approval, assign the job to legal and civil "***

Status tracking (Screen)

Take input, the agent is going to search by mobile number or transaction ID

If user input is a mobile number, then select transaction_id from LoandocX_Customers_loan_details table using mobile number in the where clause

Select transaction_id into v_tran_id from
LoandocX_Customers_loan_details
Where mobile_number = :mobile_num;

If the record is not found, then
Throw error message 'Invalid mobile number"
Exit;
End if;

After getting transaction_id
Select
transaction_state,legal_team_job_completion_date,civil_team_job_co
mpletion_date,legal_head_job_completion_date
Into…..
From LoandocX_Transactions where transaction_id = v_tran_id;

Else **user input is transaction id** then directly query
LoandocX_Transactions table

Select
transaction_state,legal_team_job_completion_date,civil_team_job_co
mpletion_date,legal_head_job_completion_date
Into…..
From LoandocX_Transactions where transaction_id = :transaction_id

If the record is not found, then
Throw error message 'Invalid mobile number"
Exit;
End if;

Now, based on the selected column,s you can arrive at where the transaction landed, and that status will be provided.

if transaction_state = 'P'
Message " Still process not started."
Exit;

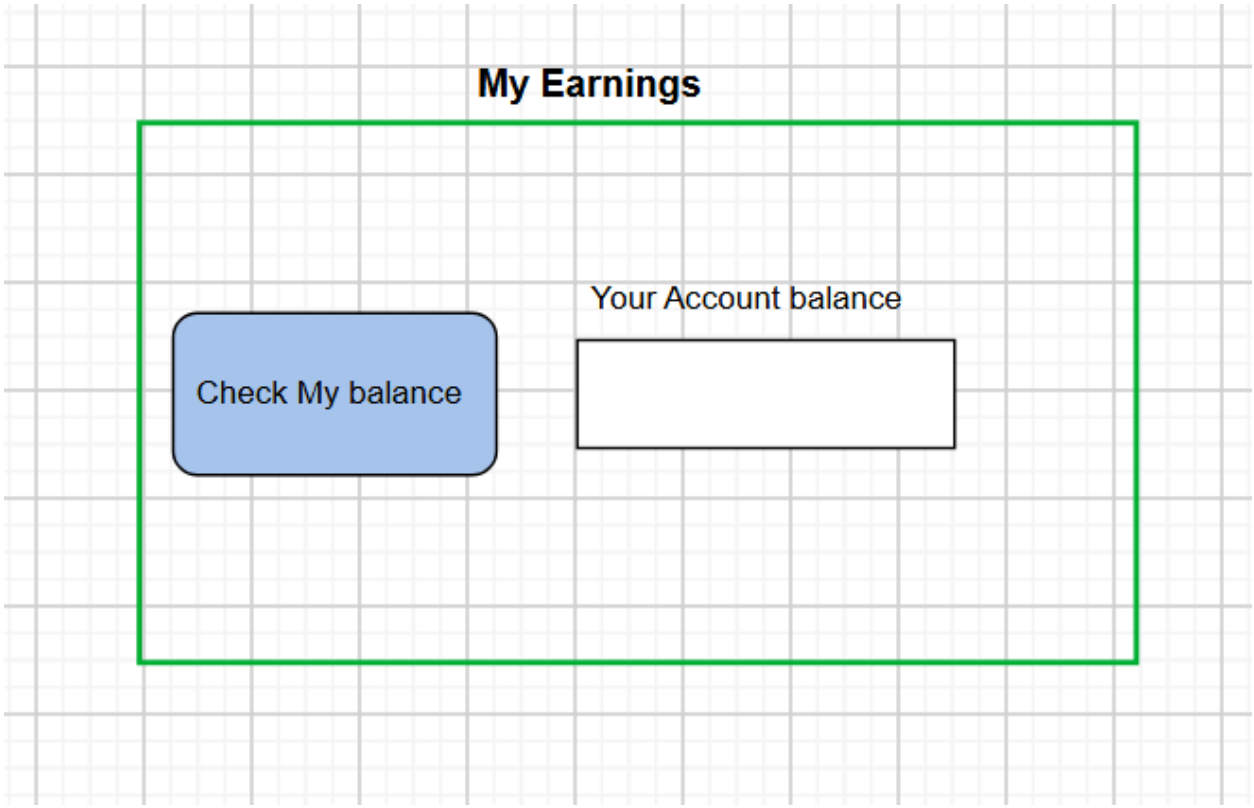

End if;

V_lc = 0
If **legal_team_job_completion_date is not null** then
  If **legal_head_job_completion_date is not null** then
    V_lc = 1
    Message " **Legal Completed**"
  Else
    Message "**Pending with Legal**"
  End if;
Else
  Message "**Pending with Legal**"
End if;

V_cc = 0
If **civil_team_job_completion_date is not null** then
  Message " **Civil Completed**"
  V_cc = 1
Else
  Message "**Pending with Civil** "
End if;

If **v_cc = 1 and v_lc = 1** then
  Message " **work completed, contact bank.**"
  exit
End if;

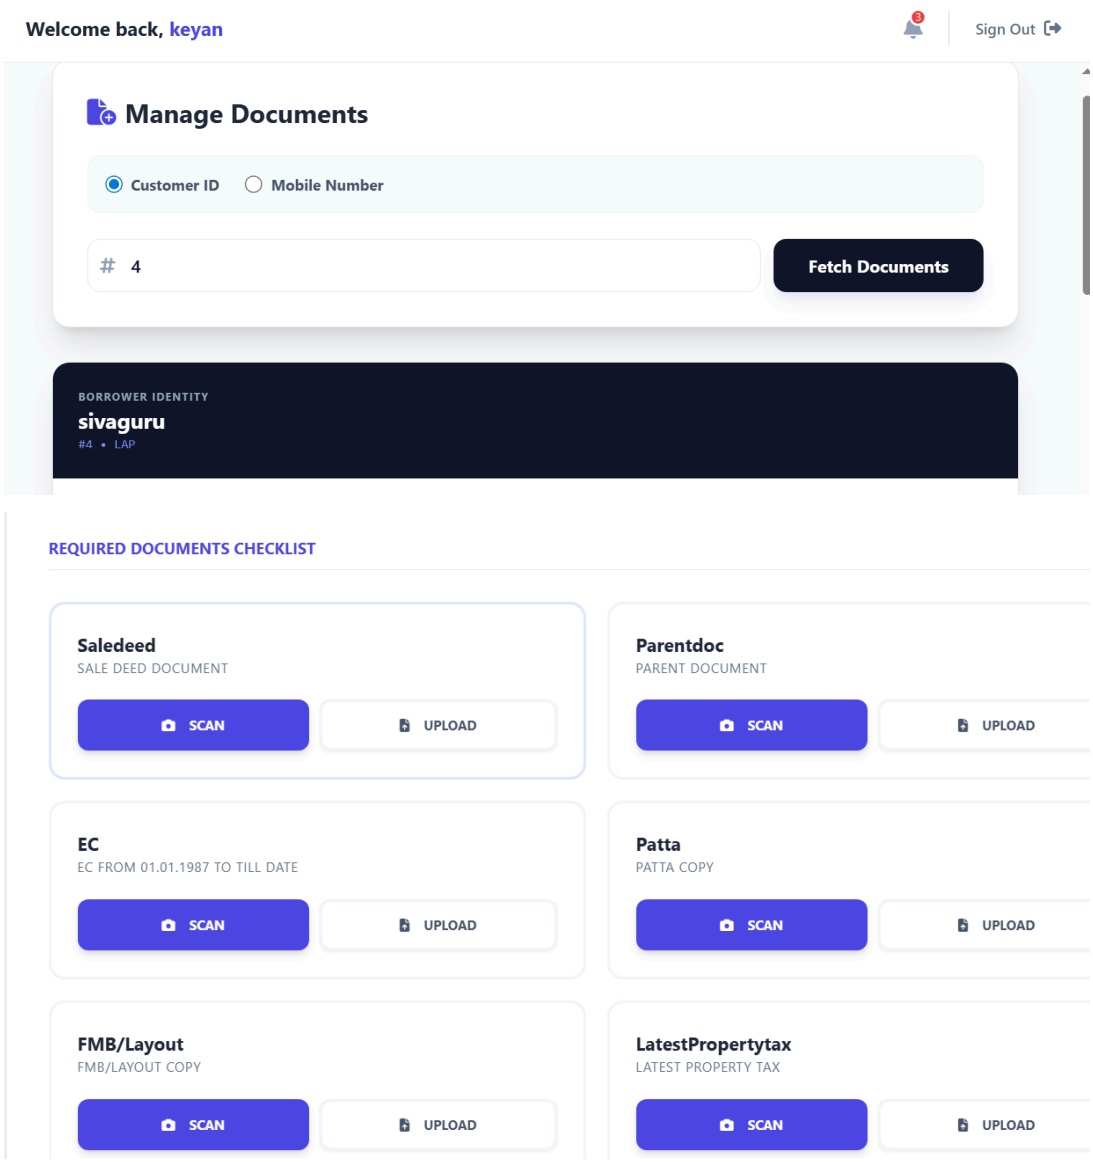

My Earnings (Screen)

Once the agent clicks the button Agent unpaid balance will be displayed in the read-only text box.

Select sum(account_balance) into v_act_bal
from LoandocX_Daywise_Agent_balance
Where agent_id = : login_agent_user
and payment_done = 'N'

Manage documents(Screen)

Design a new screen for Agent which takes customer id or mobile number as input have radio button based on that take input

if input is a **mobile number**, then
select Document_Stored_path,loan_name from
loandocx_customers_loan_details where mobile_number =
:screen.mobilenumber

if input is **customer_id**, then
select Document_Stored_path,loan_name from
loandocx_customers_loan_details where customer_id = :screen.customer_id

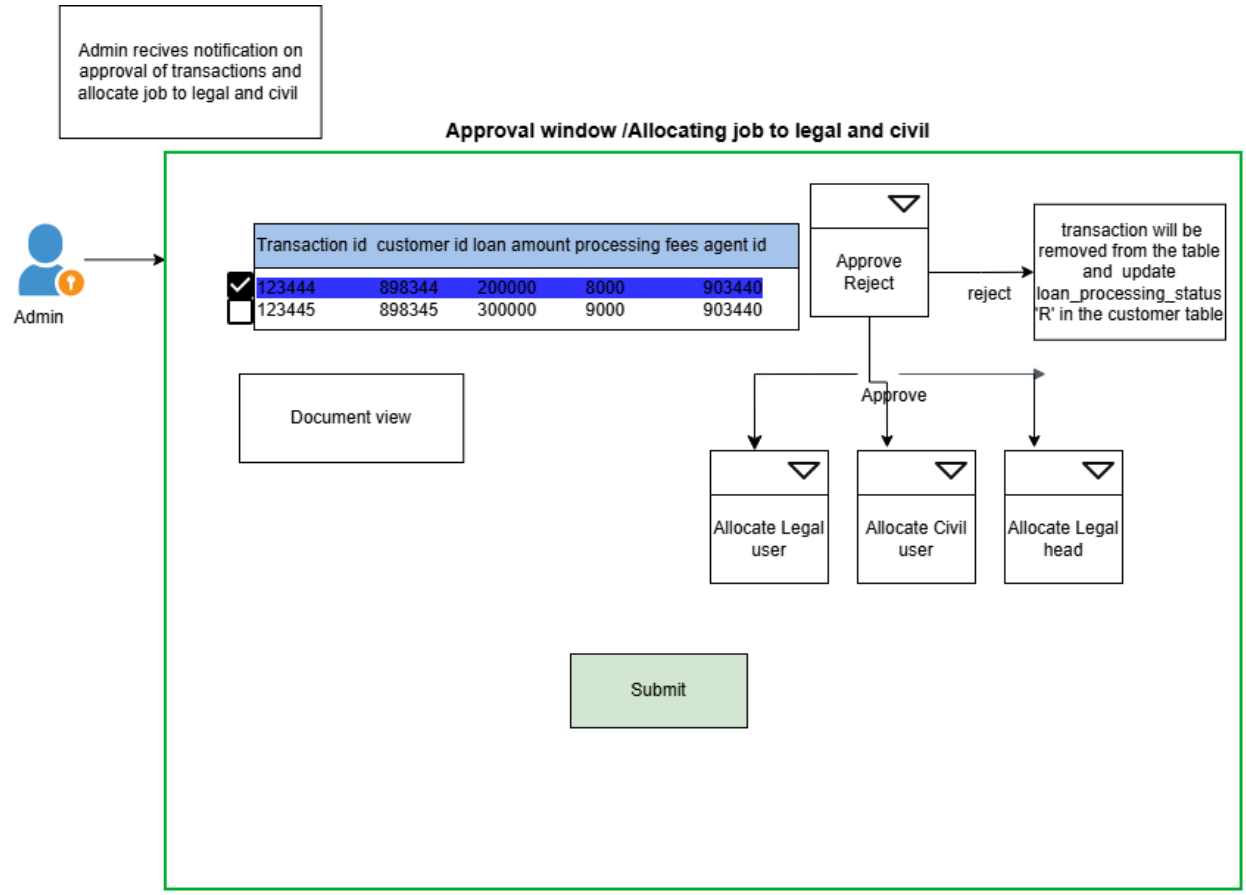

use fetched **loan name** in the query below query
now excute the below query select a.doc_name,a.doc_description from
loandocx_loan_doc_checklist a, loandocx_loan_types b
where a.loan_id = b.loan_id
and b.loan_name = loan_name
and b.loan_active = 'Y'

Like in loan creation similar document scan upload section was created based on the above document fetch list. Here, you should not mandate the document upload section.

What agent wants to click the concern document, either scans or uploads as usual, prefixing the document name to the scanned or uploaded file

In the first query, you selected the document path. Go to that path
Search with prefix name if a document already exists, you store this file with the same document prefix name, suffix with an incremented page no, say if the existing file is like page1, then store this as page 2, prefix the same name.

ADMIN MODULE / SCREENS

The agent posted the transaction. The admin will be notified to approve the transaction and allocate the job to the legal and civil team to proceed

When Admin opens the approval window(screen) only the pending transactions will be listed for approval.

Select c.loan_name,
c.customer_id,c.agent_id,c.loan_amount,c.processing_fees,t.transaction_id
From LoandocX_Customers_loan_details c , LoandocX_Transactions t
Where c.customer_id = t.customer_id
And c.transaction_id = t.transaction_id
And t.transaction_state = 'P';

Admin, based on the listed transaction, verify two cases. One, the processing amount is collected as per the loan amount. Also, verify the bank account to see if the amount was received or not. Also, verify the document uploaded as per the requirement if all conditions are okay, then the admin approves the transactions

If conditions are not met, then the admin **rejects** the transactions; in such a case have to delete the transaction from the table **LoandocX_Transactions**

On **rejections** not other fields should be visible only **submit** button will be enabled and following sql operations executed

Delete from LoandocX_Transactions where transaction_id = :tran_id;

Update LoandocX_Customers_loan_details set loan_process_status = 'R'
Where customer_id = :tran.cust_id;

Remove all documents stored under Transaction id in the file server

If the admin **approves** the transaction, all three drop-downs should be visible, with users related to the user type loaded in the respective drop-downs. They can then allocate the job to the three users. Three

drop-downs will be shown, the first one for Legal team users second one for civil team users, and the third one for legal head users

All these drop-downs get values from the user profile table based on the type

For the legal user drop-down, fetch details from **LoandocX_Users_profile** Table

Select user_id,user_name from LoandocX_Users_profile
Where user_type = 'LU'
And user_active = 'Y'

For the Civil user drop-down, fetch details from **LoandocX_Users_profile** Table

Select user_id,user_name from LoandocX_Users_profile
Where user_type = 'CU'
And user_active = 'Y'

For the legal head user drop-down, fetch details from the **LoandocX_Users_profile** Table

Select user_id,user_name from LoandocX_Users_profile
Where user_type = 'LH'
And user_active = 'Y'

All the fields in the screen are mandated once all selected submit the transaction the following SQL statements will be executed

```
Update LoandocX_Transactions
  Set transaction_state = 'A',
       Trans_state_modified_by = :login admin user.
       Trans_state_modified_on = system date,
        Legal_team_user = :legal_user_dropdown_value,
        Legal_team_job_allocation_date = system date,
        Civil_team_user = :civil_user_dropdown_value,
        Civil_team_job_allocation_date = system date,
         Legal_head_user  = :legal_head_user_dropdown_value
    Where transaction_id = :Trans_id;

     Select at_fees into v_at_fees  from LoandocX_loan_processing_fees
     where  From_loan_amount > : Loan_amount and
     to_loan_amount <= : Loan_amount

    Select count(1) into v_cnt from LoandocX_Daywise_Agent_balance
    Where agent_id = :tran.agent_id
    And trans_aproved_date = current date;

   If v_cnt > 0 then
          Update   LoandocX_Daywise_Agent_balance
          Set account_balance = account_balance + v_at_fees
           Where agent_id = :tran.agent_id
           And trans_aproved_date = current date;
 Else
   Insert into
LoandocX_Daywise_Agent_balance(agent_id,trans_aproved_date,account_balan
ce,payment_done)
 Values (:tran.agent_id,current date, v_at_fees,'N');

End if;
```

Send Notifications : To the customer, we received your payment <amount> your transaction id for tracking purposes. Your work process started

Screen id is auto generated in table so for ADD option screen id should be disabled for other options it should be enabled to enter value

This Screen is to configure which user has access to which screen
This will be stored in the table **Loandocx_screens**

The admin user only has access to this screen to add ,modify and delete entries of this table

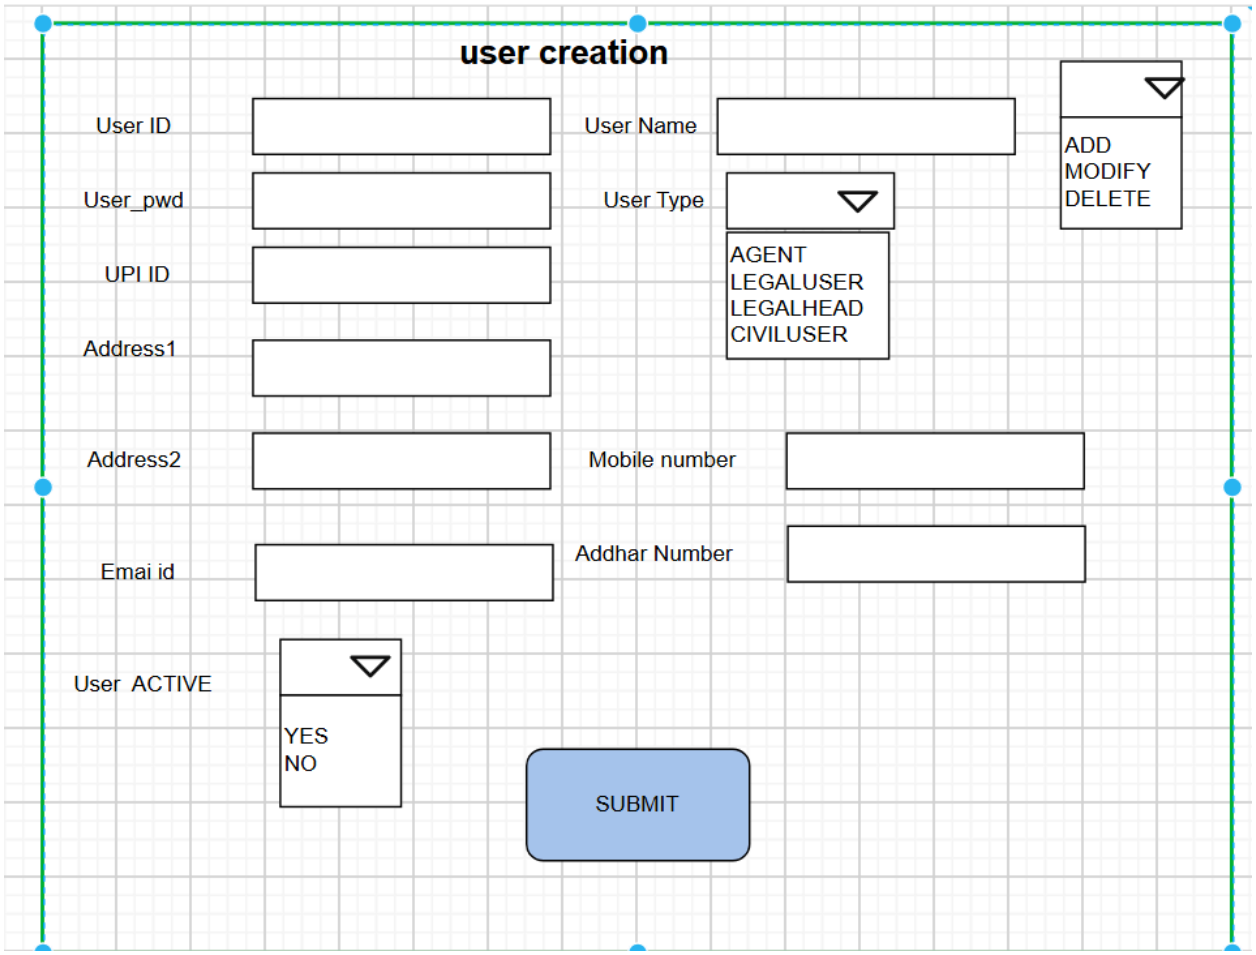

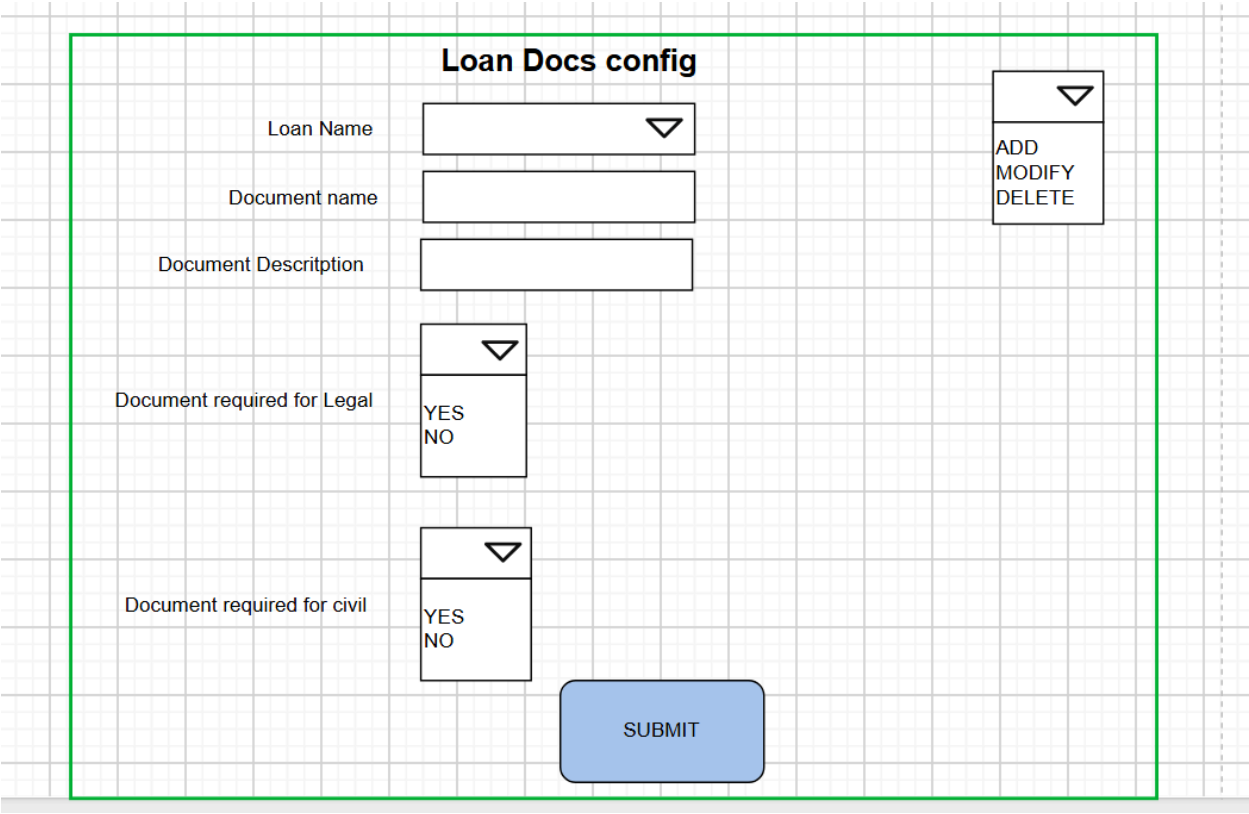

Table name **LoandocX_Users_profile**

User id is auto-generated in table for ADD option user id should be disabled and for other options it should be enabled

Only Admin can create users. This screen allows only the creation of **agentuser,legaluser,civiluser, and legalhead** users.
User password should be encrypted and stored in the database

Records can be added, modified, and deleted
In the modify part **user type** can't allow to modify rest all other Column values can be modified

Loan doc check list config screen

Admin can only access this screen to configure documents based on the loan type and who requires what document for both legal and civil.

Loan Name is drop down the data loaded from the table **LoandocX_loan_types**

Select loan_id,loan_name from LoandocX_loan_types
Where loan_active = 'Y'

Loan id and document name will be the composite key

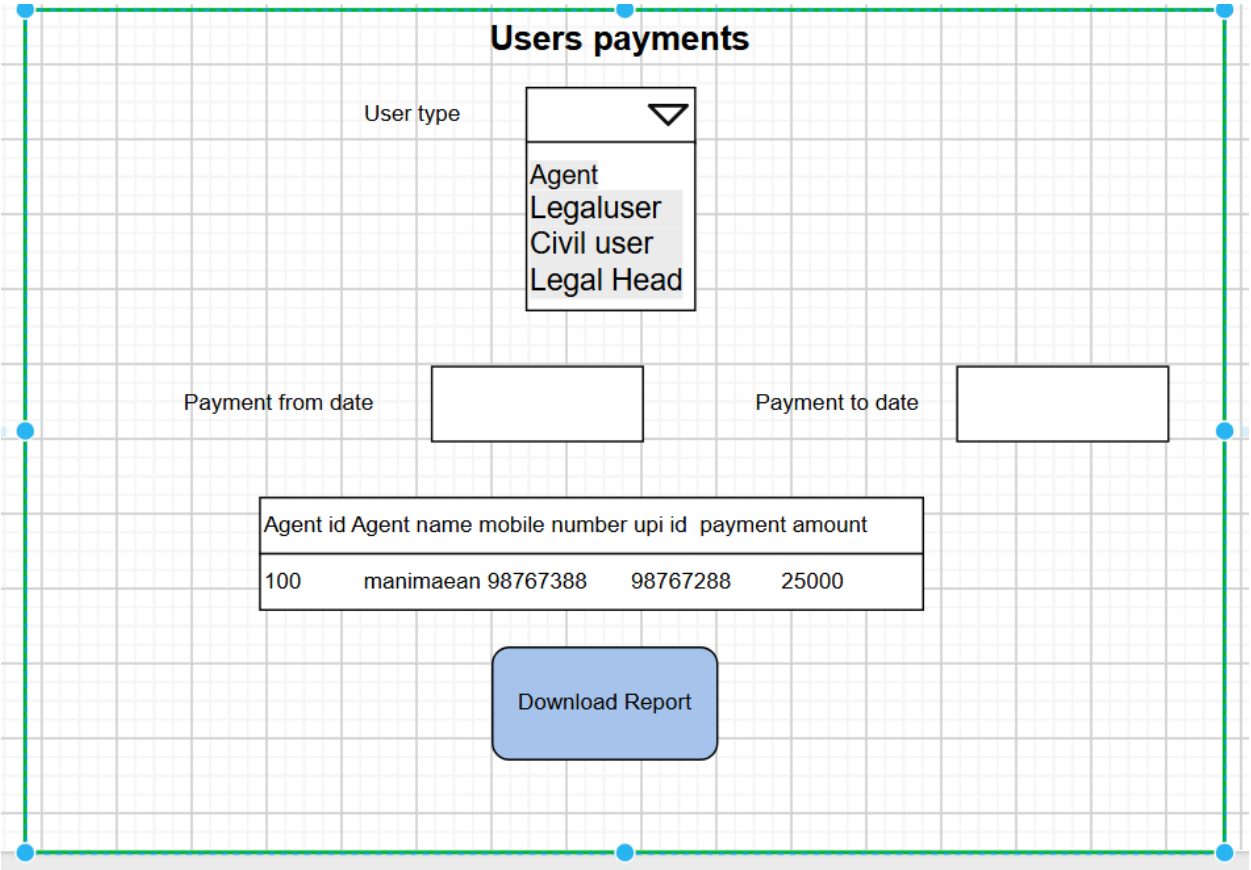

In ADD options after loan name and document name are selected, check for record is found; if found, say record already found

```
Select count(1) int v_cnt
 From LoandocX_loan_doc_checklist
 Where loan_id = :screen.loan_id
 And doc_name = :screen.doc_name

 If v_cnt > 0 then
     Message "record found"
     Exit
 End if;
```

//* for YES/NO in screen we store as 'Y' and 'N' in database tables //

Insert into LoandocX_loan_doc_checklist
(loan_id,doc_name,doc_description ,doc_required_for_legal, doc_required_for_civil)
values(:screen.loan_id,:screen.doc_name,:screen.description,:screen.doc_requred_legal,:screen.doc_required_civil);

Admin user will be paying the users once in a week, based on their earnings. The amount earned will be settled in that week

When the Admin user selects the user type from the drop-down

And selects from date and to date, then these filters are applied in the following table based on the user type. All qualified data will be downloaded so the Admin user can, based on the report, do offline payment. After paying, all the users will come back to the system to update the payment details, but this screen only downloads the usertype-wise payment list.

If Admin selects **Agent** option, then Agent payment details need to be fetched from the table **LoandocX_Daywise_Agent_balance**
If Admin selects AGENT then execute the below query

IF :screen.user_type = ‘AT’ then

```
SELECT
   b.user_name,
   b.mobile_number,
   b.upi_id,
   b.user_id,
  SUM(a.account_balance) AS payment_amount
FROM LoandocX_Daywise_Agent_balance  a
JOIN LoandocX_Users_profile b
ON a.agent_id = b.user_id
WHERE a.trans_aproved_date >= :from_date AND a.trans_aproved_date<=
:to_date
and b.user_type = 'AT'
And a.payment_done = ‘N’
GROUP BY
   b.user_name,
   b.mobile_number,
   b.upi_id,
   b.user_id;

End if;
If record not found then
        Message “ records not found”
        Exit;
End if;
```

The report format should be like

Payment report

User type: AGENT

Payment from date : 10/01/2026 **payment to date : 12/01/2026**

user_name	Mobilenumber	upi_id	user_id	payment_amount
kart	90034220	199302	101	10,000
karthik	90034220	199302	102	50,000

If Admin selects **LEGALUSER** then execute the below query

IF :screen.user_type = ‘LU’ then

```
SELECT
   b.user_name,
   b.mobile_number,
   b.upi_id,
   b.user_id,
  SUM(a.account_balance) AS payment_amount
FROM LoandocX_Daywise_Legal_user_balance a
JOIN LoandocX_Users_profile b
ON a.legal_user_id  = b.user_id
WHERE a.legal_completion_date >= :from_date AND a.legal_completion_date<=
:to_date
and b.user_type = 'LU'
And a.payment_done = ‘N’
GROUP BY
   b.user_name,
   b.mobile_number,
   b.upi_id,
   b.user_id;

End if;
```

Payment report

karthik	90034220	199302	102	50,000

Payment done (update the users whose payment is done)

Admin can only access the screen; this screen will be used to update the payment done. Admin selects the user type, then admin gives the user id

pertained to that user type. Admin gives the payment done from the start date to the end date
On what date the payment is done, and the transaction id regarding payments will be given here, just for any tracking purpose

:screen.user_type = AT/LU/LH/CU
First step validate the user

```
Select count(1) into v_cnt
From LoandocX_Users_profile
Where user_id =  :screen.user_id
And user_active = 'Y'
And user_type = :screen.user_type

If v_cnt = 0 then
   Message "Invaid user "
   Exit
End if;
```

On **submit** button

If user_type = 'AT'

```
   update LoandocX_Daywise_Agent_balance
   set payment_done = 'Y',
   payment_tran_id = :screen.payment_tranid
   payment_on  = :screen.date
   payment_done_by = :login_admin_user
  WHERE agent_id = :screen.user_id
  and trans_aproved_date >= :from_date AND trans_aproved_date <=
  :to_date   and payment_done = 'N'
```

End if;

If user_type = 'LU' then

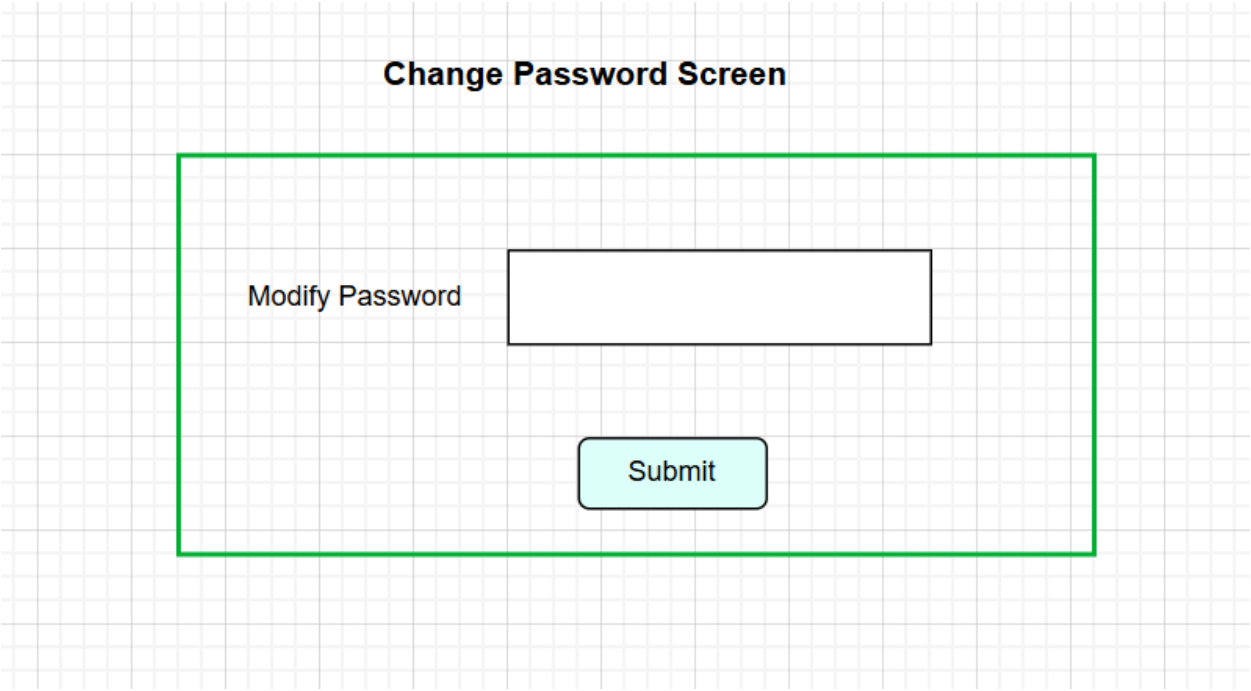

```
   update LoandocX_Daywise_Legal_user_balance
```

```
    set payment_done = 'Y',
    payment_tran_id = :screen.payment_tranid
    payment_on  = :screen.date
    payment_done_by = :login_admin_user
   WHERE legal_user_id = :screen.user_id
   and legal_completion_date >= :from_date
   And legal_completion_date <=  :to_date
   and payment_done = 'N'
End if;

If user_type = ‘LH’ then
    update LoandocX_Daywise_Legal_head_balance
    set payment_done = 'Y',
    payment_tran_id = :screen.payment_tranid
    payment_on  = :screen.date
    payment_done_by = :login_admin_user
   WHERE legal_head_id = :screen.user_id
   and legal_completion_date >= :from_date
   AND legal_completion_date <= :to_date
   and payment_done = 'N'
End if;

If user_type = ‘CU’  then
    update LoandocX_Daywise_Civil_user_balance
    set payment_done = 'Y',
    payment_tran_id = :screen.payment_tranid
    payment_on  = :screen.date
    payment_done_by = :login_admin_user
   WHERE civil_user_id = :screen.user_id
   and civil_completion_date >= :from_date
  AND civil_completion_date <= :to_date
  and payment_done = 'N'
End if;
```

Legal USER Module (Screens)

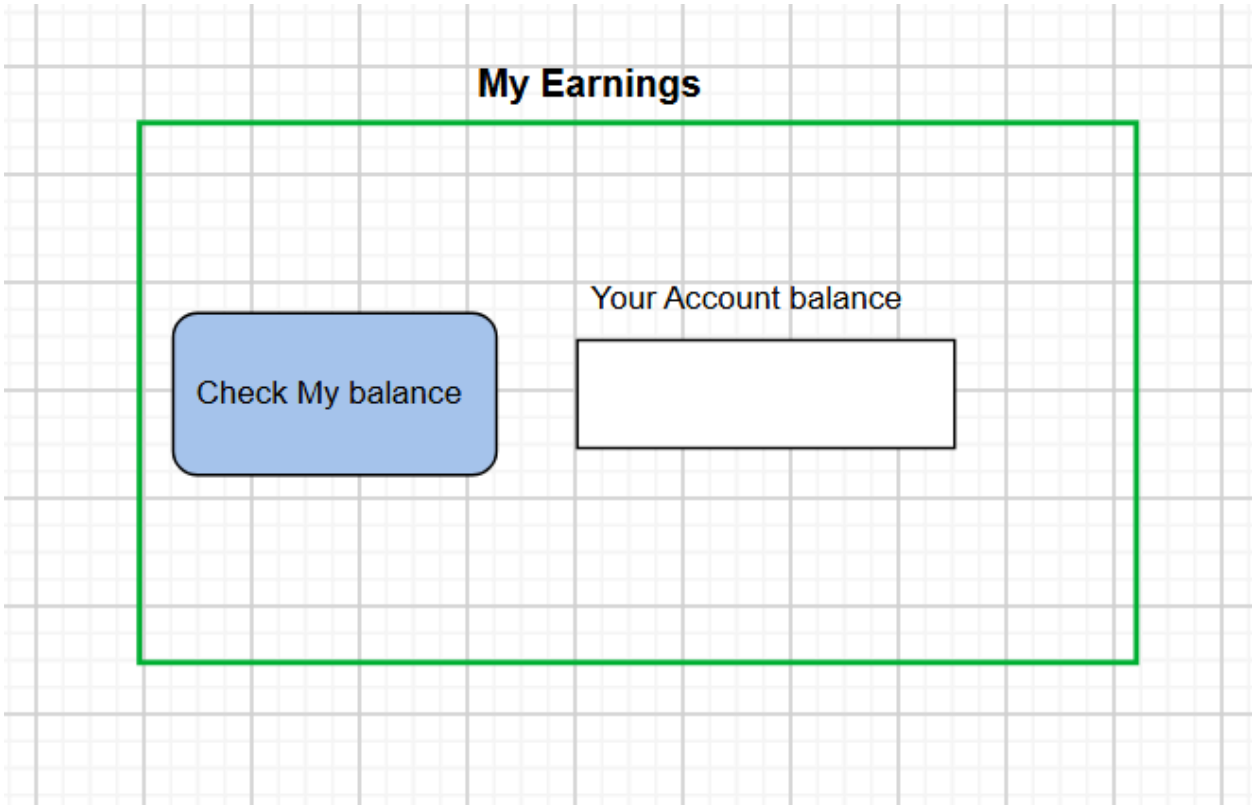

The **Legal User** will be given the provision to modify the password. The Legal user enters the password and submits it. The value will be encrypted and updated in the User_pwd column in the **LoandocX_Users_profile** table

Update LoandocX_Users_profile table set user_pwd = :encrypted_val
Where user_id = : login_user_id
And user_type = : user_type

Note : user type should be fetched from LoandocX_Users_profile table when user login the system which should be retained through out session

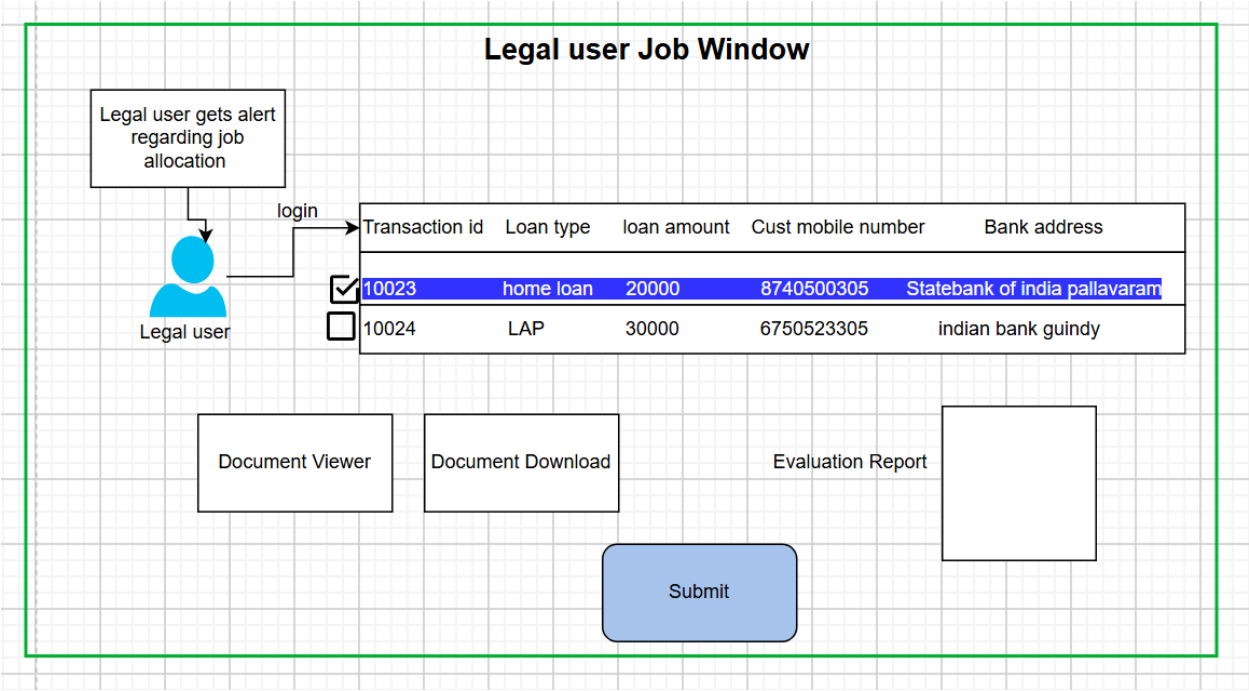

My Earnings (Screen)

Once the Legal user clicks the button Legal user unpaid balance will be displayed in the read-only text box.

Select sum(account_balance) into v_act_bal
from LoandocX_Daywise_Legal_user_balance
Where legal_user_id = : login_legal_user
and payment_done = 'N'

Legal user Job window (screen)

After the Admin approves the transaction, the Admin assigns the job to a Legal User for completion. The Legal User receives an alert notifying them that a job has been allocated.

The Legal User logs into the system and navigates to the Job Allocation window, where all assigned jobs are displayed. The user selects a job and begins working on it by downloading the required, pre-configured documents. After downloading the documents, the Legal User reviews and evaluates them for any discrepancies or queries. If clarification is needed, the user contacts the customer and obtains the required information offline.

Once the job is completed, the Legal User returns to the system, selects the completed transaction (job), and enters their observations and findings in the Evaluation Report section. After submitting the report, the job is automatically assigned to the Legal Head, who receives a notification that a new job is available for review.

SQL query which lists the job allocated to the legal user

```
Select c.loan_name,
c.customer_id,c.loan_amount,t.loan_name,t.transaction_id,
c.loan_bank_name,c.Loan_branch_name ,c.Loan_branch_address1 ,
c.Loan_branch_address2,c.Loan_branch_mailid
From LoandocX_Customers_loan_details c , LoandocX_Transactions
t
Where c.customer_id = t.customer_id
And c.transaction_id = t.transaction_id
And t.legal_team_user = :login_legal_user
And t.legal_team_job_allocation_date is not null
And t.legal_team_job_completion_date is null
And t.transaction_state = ‘A’;
```

When user presses document viewer button then the documents which are allowed to view and download for legal team should be fetched based on

the transaction id the folder will vbe already created in the app server so all documents stored under the folder now the documents which is allowed for legal only be fetched for viewing and downloading purpose

Documents which is allowed for legal below SQL query

Select dc.doc_name,dc.doc_description from
LoandocX_loan_doc_checklist dc,LoandocX_loan_types lt
Where lt.loan_id = dc.loan_id
And lt.loan_name = :screen.loan_name
And lt.loan_active = 'Y'
And dc.doc_required_for_legal = 'Y';
For download option also use the above query and download those required documents.

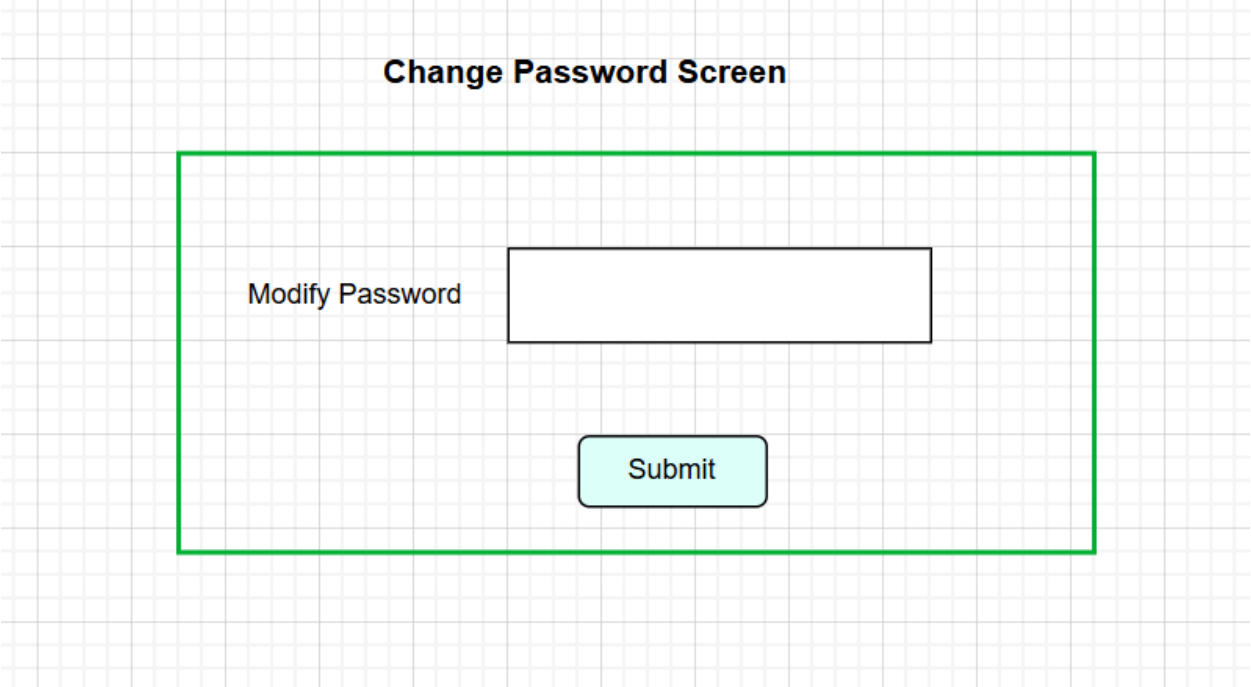

Once the legal user completes the work and he will be mandated to enter Evaluation report then only he will be allowed to press submit button

On submit following update statement need to be executed

Update LoandocX_Transactions
Set legal_team_job_completion_date = sysdate,
Legal_team_report = :screen.evaluation_report,
legal_head_job_allocation_date = sysdate
Where transaction_id = :screen.transaction_id;

Notifications : Send job alert to legal team head that job is been allocated.

Legal HEAD Module (Screens)

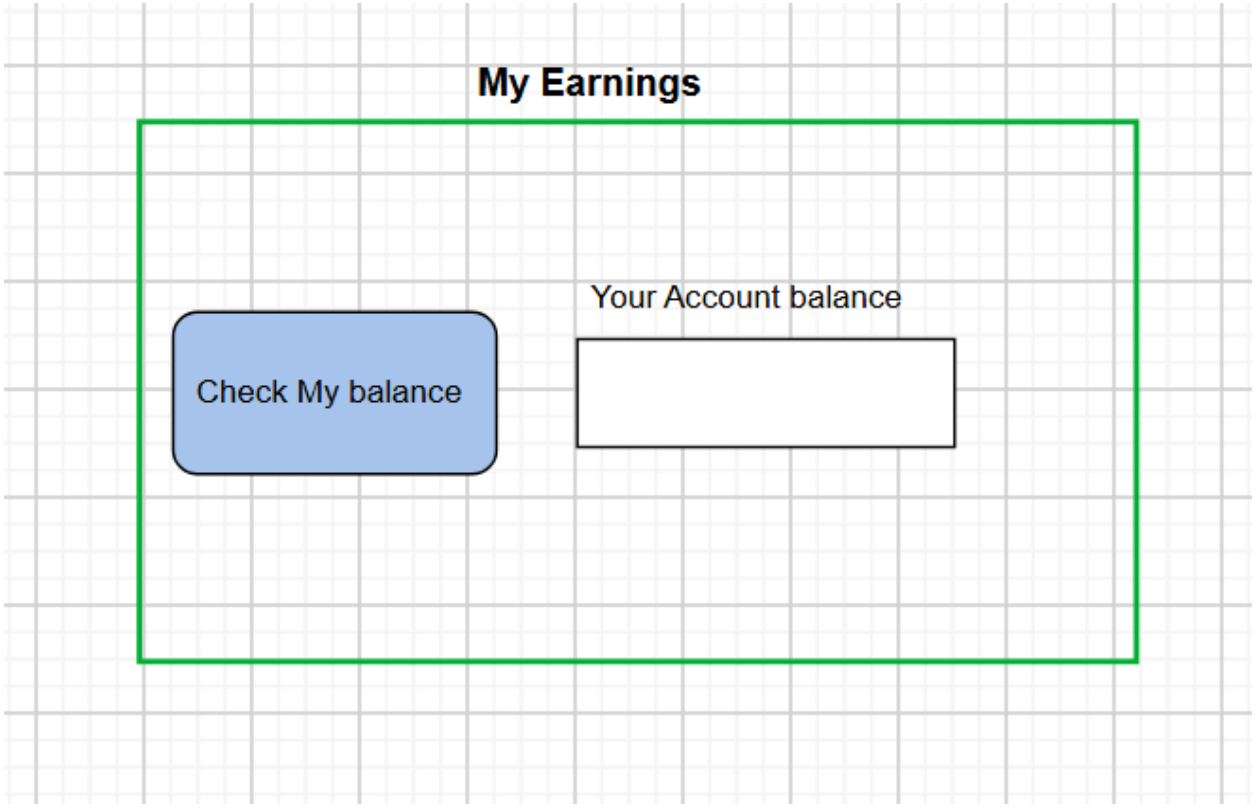

The **Legal Head User** will be given the provision to modify the password. The Legal head user enters the password and submits it. The value will be encrypted and updated in the User_pwd column in the **LoandocX_Users_profile** table

Update LoandocX_Users_profile table set user_pwd = :encrypted_val
Where user_id = : login_user_id

And user_type = : user_type

Note : user type should be fetched from LoandocX_Users_profile table when user login the system which should be retained through out session

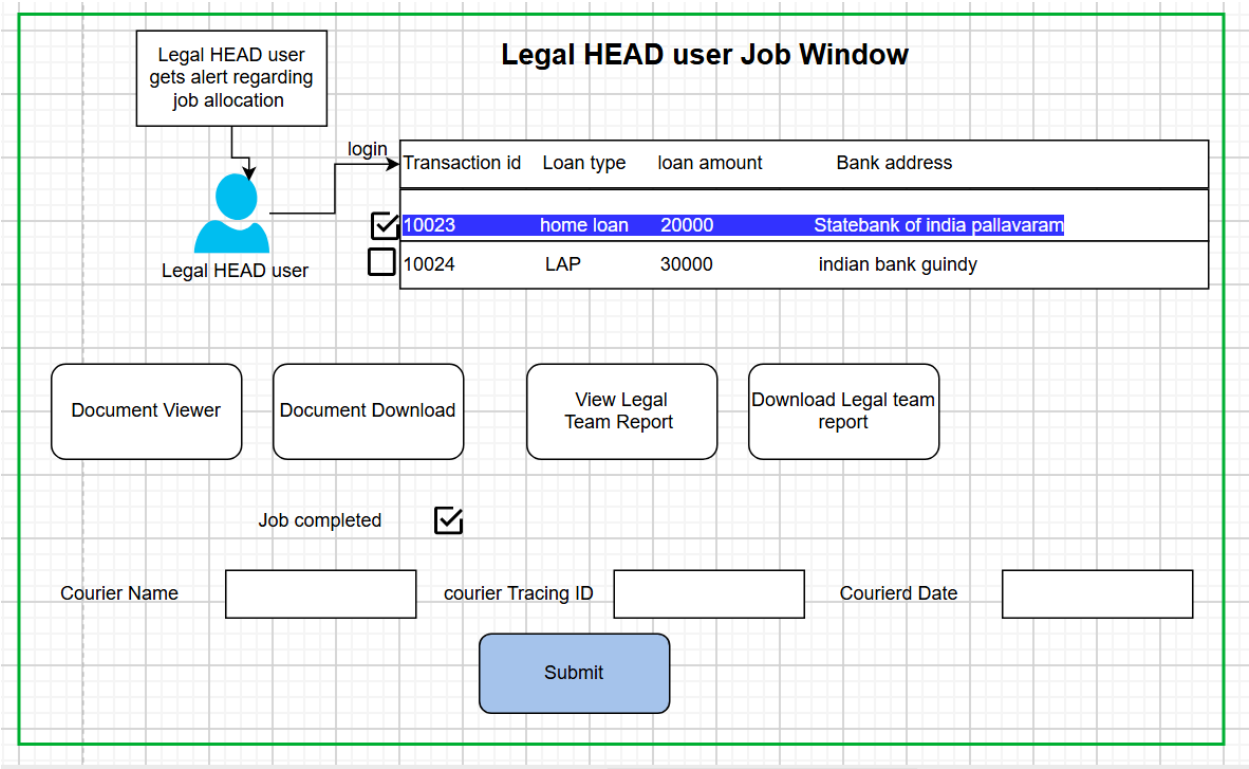

My Earnings (Screen)

Once the Legal head user clicks the button Legal head user unpaid balance will be displayed in the read-only text box.

Select sum(account_balance) into v_act_bal
from LoandocX_Daywise_Legal_head_balance
Where legal_head_id = : login_legal_user
and payment_done = 'N'

Legal HEAD user Job window (screen)

After the Legal User completes the work, the Legal HEAD user receives an alert notifying him that a job has been allocated.

The Legal HEAD User logs into the system and navigates to the Job Allocation window, where all assigned jobs are displayed. The user selects a job and begins working on it by downloading the required, pre-configured documents. After downloading the documents, the Legal HEAD User reviews and evaluates them for any discrepancies or queries. Once the job is completed, the Legal HEAD User downloads all required documents, attests his stamp, and couriers the documents to the bank and returns to the system, clicks the option Job completed, and enters the courier name, courier tracking id and courier send date. After entering these details, only the submit button is enabled.

When the Job window from the menu is clicked, then the following SQL query that lists the job allocated to the legal HEAD user

```
Select c.loan_name, c.loan_amount,t.transaction_id,
c.loan_bank_name,c.Loan_branch_name ,c.Loan_branch_address1 ,
c.Loan_branch_address2,c.Loan_branch_mailid
,t.legal_team_user,t.legal_team_job_completion_date
From LoandocX_Customers_loan_details c , LoandocX_Transactions
t
Where c.customer_id = t.customer_id
And c.transaction_id = t.transaction_id
And t.legal_head_user  = :login_legal_head_user
And t.legal_head_job_allocation_date  is not null
And t.legal_head_job_completion_date  is null
And t.transaction_state = 'A';
```

When Legal HEAD user presses document viewer button then the documents which are allowed to view and download for legal HEAD team should be fetched based on the transaction id the folder will be already created in the app server so all documents stored under the folder now the documents which is allowed for legal only be fetched for viewing and downloading purpose

Documents which is allowed for legal below SQL query

```
Select dc.doc_name,dc.doc_description from
LoandocX_loan_doc_checklist dc,LoandocX_loan_types lt
Where lt.loan_id = dc.loan_id
And lt.loan_name = :screen.loan_name
And lt.loan_active = 'Y'
And dc.doc_required_for_legal = 'Y';
```

For download option also use the above query and download those required documents.

Legal HEAD User download all required documents and attest his stamp and courier the documents to bank and returns to the system, click the option Job completed , and enters the courier name, courier tracking id and courier send date after entering these details only the submit button will be enabled.

On submit following update statement need to be executed

Update LoandocX_Transactions
Set legal_head_job_completion_date = :screen.date,
legal_send_courier_name = :screen.courier_name,
legal_courier_tracking_id = :screen.courier_tracking_id,
legal_courier_date = :screen.date
Where transaction_id = :screen.transaction_id;

For Legal user and legal head user commission fees to be fetched from LoandocX_loan_processing_fees table

Select LU_fees ,LH_fees into v_lu_fees , v_lh_fees from LoandocX_loan_processing_fees
where From_loan_amount > :screen. Loan_amount and to_loan_amount <= :screen. Loan_amount

Now legal user and the legal head user completed the job, so their respective account balance need to be updated

Select count(1) into v_cnt from LoandocX_Daywise_Legal_user_balance
Where legal_user_id = :tran.legal_user_id
And legal_completion_date = :tran.legal_team_job_completion_date;

```
If v_cnt > 0 then

 Update   LoandocX_Daywise_Legal_user_balance
 Set account_balance = account_balance + v_lu_fees
 Where legal_user_id = :tran.legal_user_id
 And legal_completion_date = :tran.legal_team_job_completion_date;

 Else

  Insert into  LoandocX_Daywise_Legal_user_balance
  (legal_user_id ,legal_completion_date,account_balance,
payment_done)
  Values (:tran.legal_user_id,
:tran.legal_team_job_completion_date, v_lu_fees,'N');

 End if;

Select count(1) into v_cnt from
LoandocX_Daywise_Legal_head_balance
Where legal_head_id = :login_user
And legal_completion_date  = :screen.date;

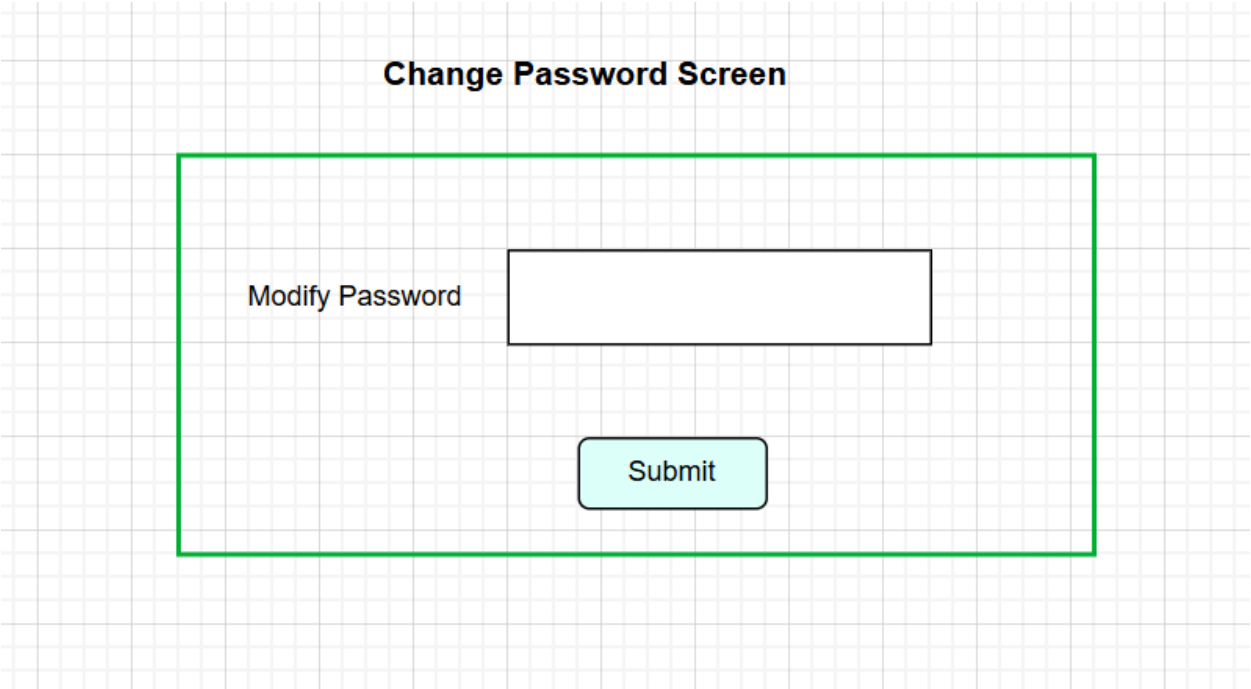

If v_cnt > 0 then
 Update   LoandocX_Daywise_Legal_head_balance
 Set account_balance = account_balance + v_lu_fees
 Where legal_head_id = :login_user
And legal_completion_date  = :screen.date;
 Else

  Insert into  LoandocX_Daywise_Legal_head_balance
  (legal_head_id  ,legal_completion_date,account_balance,
  payment_done)   Values (:login_userid,:screen.date, v_lh_fees,'N');

 End if;
```

Notifications : To Legal head and legal users that your account balance updated for completing this job : tran id

Civil user Module (Screens)

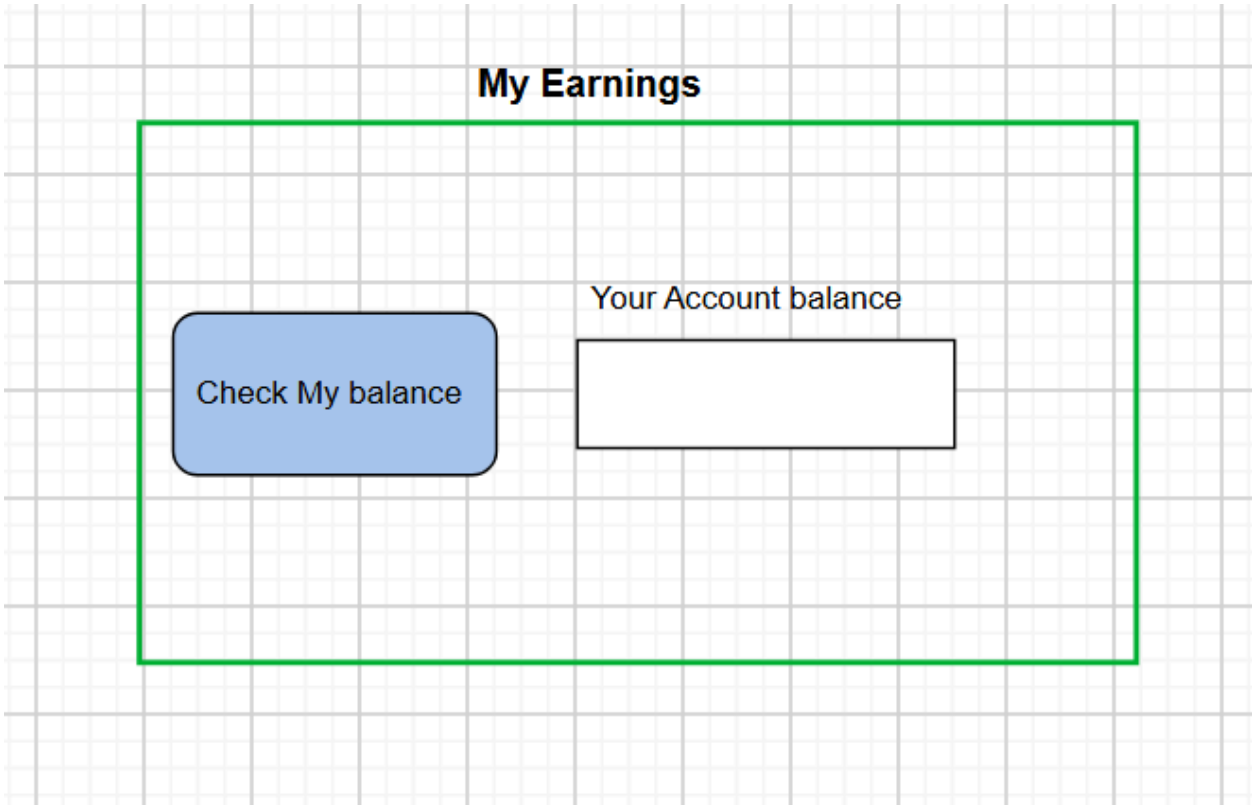

The Civil **User** will be given the provision to modify the password. The Civil user enters the password and submits it. The value will be encrypted and updated in the User_pwd column in the **LoandocX_Users_profile** table

Update LoandocX_Users_profile table set user_pwd = :encrypted_val
Where user_id = : login_user_id
And user_type = : user_type

Note: user type should be fetched from LoandocX_Users_profile table when the user logs into the system, which should be retained throughout the session

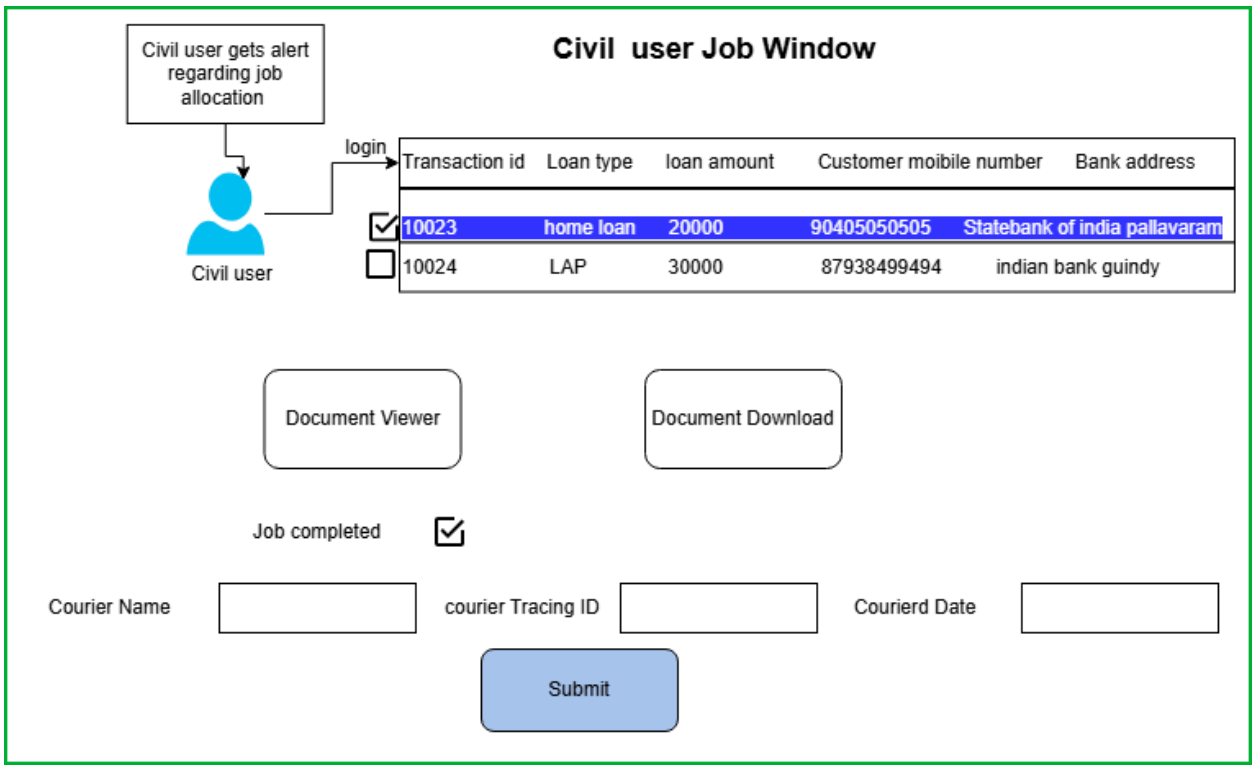

My Earnings (Screen)

Once the civil user clicks the button Civil user's unpaid balance will be displayed in the read-only text box.

Select sum(account_balance) into v_act_bal
from LoandocX_Daywise_Civil_user_balance
Where civil_user_id = : login_civil_user
and payment_done = 'N'

Civil user Job window (screen)

After the Admin user approves the work Civil user receives an alert notifying him that a job has been allocated.

The Civil User logs into the system and navigates to the Job Allocation window, where all assigned jobs are displayed. The user selects a job and begins working on it by downloading the required, pre-configured documents. After downloading the documents, The civil team starts work offline visits site and evaluates the property Once the job is completed, the Civil User download all required documents and attest his stamp and courier the documents to bank and returns to the system, click the option Job completed, and enters the courier name, courier tracking id and courier send date after entering these details only the submit button enabled.

When the Job window from the menu is clicked, the following SQL query that lists the job allocated to the Civil user

```
Select c.loan_name, c.loan_amount,t.transaction_id,
c.loan_bank_name,c.Loan_branch_name ,c.Loan_branch_address1 ,
c.Loan_branch_address2,c.Loan_branch_mailid
From LoandocX_Customers_loan_details c , LoandocX_Transactions
t
Where c.customer_id = t.customer_id
And c.transaction_id = t.transaction_id
And t.civil_team_user   = :login_civil_team_user
And t.civil_team_job_allocation_date   is not null
And t.civil_team_job_completion_date   is null
And t.transaction_state = 'A';
```

When the Civil user presses the document viewer button, the documents that are allowed to be viewed and downloaded for the Civil user should be fetched based on the transaction ID. The folder will already be created in the app server, so all documents will be stored under the folder. Now, the documents that are allowed for legal only be fetched for viewing and downloading purposes

Documents that are allowed for legal use below the SQL query

```
Select dc.doc_name,dc.doc_description from
LoandocX_loan_doc_checklist dc,LoandocX_loan_types lt
Where lt.loan_id = dc.loan_id
And lt.loan_name = :screen.loan_name
And lt.loan_active = 'Y'
And dc.doc_required_for_civil = 'Y';
```

For the download option, also use the above query and download the required documents.

Civil User downloads all required documents, attests his stamp, and couriers the documents to the bank and returns to the system, clicks the option Job completed, and enters the courier name, courier tracking id, and courier send date. After entering these details, only the submit button will be enabled.

On submit following update statement needs to be executed

```
Update LoandocX_Transactions
Set civil_team_job_completion_date = :screen.date,
    civil_send_courier_name = :screen.courier_name,
    civil_courier_tracking_id  = :screen.courier_tracking_id,
    civil_courier_date = :screen.date
Where  transaction_id = :screen.transaction_id;
```

For civil user commission fees to be fetched from LoandocX_loan_processing_fees table

```
Select  CU_fees into v_cu_fees from
LoandocX_loan_processing_fees
where  From_loan_amount > :screen. Loan_amount and
to_loan_amount <= :screen. Loan_amount;
```

Now the Civil user completed the job, so their respective account balance need to be updated

```
Select count(1) into v_cnt from
LoandocX_Daywise_Civil_user_balance
Where civil_user_id = :login_civil_user
And civil_completion_date  = :screen.courierd_date

If v_cnt > 0 then
```

```
Update   LoandocX_Daywise_Civil_user_balance
Set account_balance = account_balance + v_cu_fees
Where civil_user_id = :login_civil_user
And civil_completion_date  = :screen.courierd_date;

Else

 Insert into  LoandocX_Daywise_Civil_user_balance
 (civil_user_id  ,civil_completion_date ,account_balance,
payment_done)
 Values (:login_civil_user,:screen.courierd_date, v_cu_fees,'N');

End if;
```

Transaction Table Archival Process

Service should run, which will remove the aged transactional records from the **LoandocX_Transactions** table and move those removed records To **LoandocX_Transactions_archive** table

The **LoandocX_config_params** table has a parameter name "**TRAN_ARCHIVE_DAYS**" configured with the param value.
Which gives no of days after the transaction job is done, add the no of days to the current date
Use the below store procedure for archival purposes

```
DELIMITER $$

CREATE PROCEDURE sp_archive_loandocx_transactions()
BEGIN
   DECLARE v_days INT DEFAULT 0;
   DECLARE v_rows_archived INT DEFAULT 0;

   -- Error handler
   DECLARE EXIT HANDLER FOR SQLEXCEPTION
   BEGIN
      ROLLBACK;
      SIGNAL SQLSTATE '45000'
      SET MESSAGE_TEXT = 'Archival failed. Transaction rolled back.';
   END;

   -- Fetch retention days
   SELECT CAST(param_value AS SIGNED)
   INTO v_days
   FROM LoandocX_config_params
   WHERE param_name = 'TRAN_ARCHIVE_DAYS';

   START TRANSACTION;

   -- Archive
```

```
    INSERT INTO LoandocX_Transactions_Archive
    SELECT *
    FROM LoandocX_Transactions
    WHERE civil_team_job_completion_date IS NOT NULL
      AND legal_head_job_completion_date IS NOT NULL
      AND (
            civil_team_job_completion_date
               < (CURDATE() - INTERVAL v_days DAY)
         OR legal_head_job_completion_date
               < (CURDATE() - INTERVAL v_days DAY)
          );

    SET v_rows_archived = ROW_COUNT();

    -- Delete only if something was archived
    IF v_rows_archived > 0 THEN
       DELETE t
       FROM LoandocX_Transactions t
       JOIN LoandocX_Transactions_Archive a
         ON t.transaction_id = a.transaction_id;
    END IF;

    COMMIT;

    -- Optional audit output
    SELECT v_rows_archived AS archived_records;

END$$

DELIMITER ;
```
